

Year 7 Mathematics & Science

Lesson Plan · Quarter 1, Weeks 1–6

4 August – 11 September 2026

Mr Bowen · Cambridge Lower Secondary, Stage 7

➤ How to use this document

Every coloured entry is a live link. The contents page jumps to any week or day; [blue](#) links open the deployed site — the slides the class saw, the one-page teacher plan, or the homework shelf.

Each week is one overview page (the week at a glance, every link, and the Friday parent update as it went out) followed by one page per teaching day, so a single day can be printed and written on. Orange boxes are notes to the teacher, never part of a post.

Timetable: Science 8:45–9:35, Mathematics 10:45–11:35.

Week 1 · 4–7 August 2026

Day	Science · 8:45 – 9:35	Mathematics · 10:45 – 11:35
Tuesday 4	Day One. Stage 6 topics that return in Stage 7; using a Table of Contents.	Day One. Class expectations, the weekly schedule, setting up equipment.
Wednesday 5	Unit 1.1 Plant cells, Part 1 — cell, organelle, and the scale of a cell.	Stage 6 diagnostic — baseline of what carries over from Year 6.
Thursday 6	Unit 1.1 Plant cells, Part 2 — the organelles, and what a microscope does.	Unit 1.1 Adding and subtracting integers.
Friday 7	Consolidating 1.1 — Workbook, and the scale-of-a-cell video.	Consolidating 1.1 — Workbook, then Around the World.

Teacher plan · Science 1.1

► Slides · Maths 1.1 Adding & Subtracting Integers

Teacher plan · Maths 1.1

Homework: [Packet 1 · Integers and Cells](#) — out Thursday 6 August, due Monday 10 August.

Parent update · Friday 7 August

Welcome to our Google Classroom! I'll post a short update here every Friday, so you always know what we covered that week, what's coming up next, and what homework is due — all in the post itself, so there's nothing else to open.

FAMILY NOTEBOOKS

Every student carries a Family Notebook home. It holds their homework and any notes from me, so please look through it with your child each week and sign it. The Friday post and the notebook say the same thing — just one on the screen and one on paper.

THIS WEEK

Science — Unit 1.1: Cells, The Building Blocks of Life

We learned that every living thing is made of cells, that cells are too small to see without a microscope, and the names of the main parts inside one.

► Slides · Science 1.1 Cells

https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_1

Maths — Unit 1.1: Adding and Subtracting Integers

We added and subtracted positive and negative numbers on a number line, and practised turning an English sentence into a calculation.

► Slides · Maths 1.1 Adding & Subtracting Integers

https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_1

These links open the same slides we used in class. Students can click through them at home to review.

NEXT WEEK

Science

Animal cells, then specialised cells — cells with a special shape for a special job, like a red blood cell or a root hair cell.

Maths

Multiplying and dividing negative numbers (the sign rules), then factors — the numbers that divide exactly into another number.

I'll post these links in next Friday's update.

HOMEWORK

Every student was given a paper homework packet on Thursday. It is due **Monday**, at the start of class.

[Packet 1 · Integers and Cells](#)

The packet has short notes at the top of each section to remind students what to do, and students can take their notebooks home too if they want extra help — our class notes cover everything in the packet. Please make sure it comes back to school on Monday, and if your child has lost theirs, just let me know and I'll print another one.

Thank you,
Mr Bowen

Tuesday 4 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Recognising Stage 6 topics that return in Stage 7. Using a Table of Contents to find a topic in the Learner's Book.	Model reading the Contents page from the front — unit, topic, page number. Groups scan the Year 7 Contents and pick out topics they already met in Year 6. Poster: the topic name, its page number, and what they already know about it. Posters shared with the room at the end.	Poster gives a correct topic with its correct page number. Students can open the book to a named topic without help. Prior knowledge is written in full sentences.
Mathematics 10:45 – 11:35	Class expectations, the weekly schedule, and setting up equipment. Students can explain the expectations at home.	► Slides · Day One, from "Your Week, Every Week" Timetable slide — class reads the four times back: 8:00 arrival, 8:30 homeroom, 8:45 Science, 10:45 Mathematics. Expectation letter, seven sections, students following on their own printed copy. Distribute supplies: binder, folder, three sleeves, Learner's Book. Set up: names on binder and folder; sleeves labelled Maths / Science / English; letter at the very front; taped name on the Learner's Book.	Hold-it-up check — all six items correct, checked from the front of the room. Students can state their two lesson times and where the phone goes on arrival.

Wednesday 5 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.1 Plant cells, Part 1. Define a cell and an organelle, and describe how small a cell is.	► Slides · Unit 1.1 Cells, Part 1, up to “Parts of a Plant Cell” Starter: one full sentence describing how small a cell is. Soda Can Challenge — guesses first, then the numbers: 0.02 mm to 120 mm, scale factor 6000, Mr Bowen at 10.68 km against Everest at 8.85 km. Copy the definition of “cell”; Latin <i>cella</i>, the prison cell, Hooke’s cork drawing. Leaf micrograph — what are the little green circles? Organelle analogy, then the interactive cell diagram. Draw This: the plant cell from p. 9, all seven labels.	Scale factor and the 10.68 km answer worked out correctly on paper. Definitions of “cell” and “organelle” copied into notebooks. Labelled plant-cell drawing with all seven labels.
Mathematics 10:45 – 11:35	Stage 6 diagnostic — baseline of what students carry over from Year 6.	Papers face down, 40 minutes, silence. Hands up to have a word READ aloud — never explained. Students who finish early return to yesterday’s science posters. Marked tonight so Thursday can be pitched to it.	Marked diagnostic paper for every student. Gaps recorded by strand; used to set the pace for Quarter 1.

Thursday 6 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.1 Plant cells, Part 2. Name the shared and plant-only organelles and their jobs; explain what a microscope does and what a model cannot show.	► Slides · Unit 1.1 Cells, Part 2, from “Every Cell Has These Four” The four organelles every cell has. Plant-only extras: cell wall, cellulose and sap vacuole; then chloroplast and chlorophyll, with real onion and pondweed. Plant and animal cells side by side. Draw This: the labelled microscope from p. 10; copy “microscope” and walk the light path. The electron microscope; models and their limitations. Begin Workbook 1.1, pages 2–3.	13 definitions and 2 labelled drawings in the notebook. Students can say which organelles only plants have. Workbook 1.1 pp. 2–3 started.
Mathematics 10:45 – 11:35	Unit 1.1 Adding and subtracting integers. Move both ways along the number line, including subtracting a negative, and turn an English sentence into a calculation.	► Slides · Maths 1.1 Adding & Subtracting Integers Team game: name the negatives against a 2-minute timer, duplicates crossed off both lists. Draw This: the number line. Copy “integer” and “inverse”. “Negative five” against “minus five” — the same dash doing two jobs. Jumper widget: pairs say which way the arrow will go before the button is pressed. Up-words and down-words, with the sentence patterns. “Subtract 5 from 8” and “the difference between –3 and 4” — hint, wrong answers out loud, then reveal. Word problems on mini-whiteboards: car park, bank account, research station, snail.	8 – 5 = 3 given with the reason — “from” marks the number you start at. Difference between –3 and 4 is 7, while –3 – 4 is –7. Calculation written down before the answer on every word problem.

Friday 7 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Consolidating Unit 1.1 independently. Picturing the scale of a cell.	Workbook 1.1 – continue and complete, circulating and supporting. Kurzgesagt video: what a cell would be like scaled up enormously. Link the video back to Wednesday’s soda-can number.	Completed Workbook 1.1 section, marked. Students describe one thing the video showed that a drawing cannot.
Mathematics 10:45 – 11:35	Consolidating adding and subtracting integers. Recall at speed.	Workbook 1.1 – pages taken from the class folders, worked independently. “Around the World” with integer questions if time allows.	Completed Workbook 1.1 pages. Correct answers at speed in Around the World.

Week 2 · 10–14 August 2026

Day	Science · 8:45 – 9:35	Mathematics · 10:45 – 11:35
Monday 10	Peer-review Homework Packet 1 — marking a classmate's work.	Unit 1.2 Multiplying & Dividing Integers, Day 1 — the four sign rules.
Tuesday 11	Unit 1.2 Animal Cells — and how they differ from plant cells.	Unit 1.2, Day 2 — brackets first, and estimating.
Wednesday 12	Unit 1.3 Specialised Cells, Day 1 — the three animal cells.	Unit 1.3 Lowest Common Multiples, Day 1.
Thursday 13	Unit 1.3, Day 2 — the two plant cells; the structure–function table.	Unit 1.3, Day 2 — the “don't just multiply” trap; word problems.
Friday 14	Consolidating 1.2 and 1.3 — Workbook, independent practice.	Jeopardy review game — Unit 1.1 to 1.3 in teams.

Teacher plan · Maths 1.3

► Slides · Jeopardy — Friday's review game

Homework: [Packet 2 · Signs, Multiples and Cells](#) — out Thursday 13 August, due Monday 17 August.

Parent update · Friday 14 August

THIS WEEK

Science — Unit 1.2: Animal Cells, What You Are Made Of

We named the parts of an animal cell and compared them with plant cells. The main thing to remember: animal cells have no cell wall and no chloroplasts, so they're soft and can't make their own food.

► Slides · Science 1.2 Animal Cells

https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_2

Science — Unit 1.3: Specialised Cells, Built for the Job

We looked at cells with a special shape for a special job — red blood cells, nerve cells, root hair cells — and practised saying why the shape helps: “It is adapted to ... because it has ...”

► Slides · Science 1.3 Specialised Cells

https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_3

Maths — Unit 1.2: Multiplying & Dividing Integers

We learned the four sign rules. The trap we spent time on: two negatives make a positive when you multiply or divide, but not when you add. $-3 + -4$ is -7 , not 7.

► Slides · Maths 1.2 Multiplying & Dividing Integers

https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_2

Maths — Unit 1.3: Lowest Common Multiples

We listed multiples, found the ones two numbers share, and picked the lowest. “Common” in maths means shared, not ordinary.

► Slides · Maths 1.3 Lowest Common Multiples

https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_3

These links open the same slides we used in class. Students can click through them at home to review.

NEW: LABS START THURSDAY

Starting Thursday 20 August, Year 7 will have a science lab every Thursday morning.

Our first lab is a Safety and Skills Lab. Before we do any real experiments, students need to know the rules of the room and how to handle the equipment, so we'll go through the safety rules, what to do if something spills or breaks, and how to measure accurately.

NEXT WEEK

Science

Cells, tissues and organs (1.4). How cells of the same kind group into tissues, tissues into organs, and organs into systems — the heart, the lungs, the stomach. This finishes Unit 1, so we will also review the whole unit before the Unit 1 check.

Maths

Highest common factors (1.4), then tests for divisibility (1.5). Factors are the numbers

that divide exactly into another number. Then some quick tricks for checking whether a big number divides by 3, 4, 9 or 11 without doing the division.

I'll post these links in next Friday's update.

HOMEWORK

Homework Packet 2 went home on Thursday. It is due **Monday**, at the start of class, and covers everything above — the sign rules, multiples and the LCM, plant and animal cells, and specialised cells.

[Packet 2 · Signs, Multiples and Cells](#)

Each section has short notes at the top to remind students what to do. Students can take their notebooks home for extra help too — our class notes cover everything in the packet. If your child has lost theirs, let me know and I'll print another one.

FAMILY NOTEBOOKS

Please look through the notebook with your child this week and sign it. The Friday post and the notebook say the same thing, just one on the screen and one on paper.

Thank you,
Mr Bowen

Monday 10 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Peer-review Homework Packet 1 (Cells). Give accurate, kind feedback on another student's work.	Hand the packets out so each student marks a classmate's copy – never their own. Mark in coloured pencil against the answer key on the board, question by question. Tick correct answers; write the correction, not just a cross, where the answer is wrong. Total the score, initial the bottom, and return the packet to its owner to read. Class tally of the two questions missed most often; reteach those on the board.	Each packet is marked in coloured pencil with corrections, a score and the marker's initials. Students can name the two questions the class found hardest.
Mathematics 10:45 – 11:35	Unit 1.2 Multiplying & Dividing Integers, Day 1. Multiply and divide integers; begin the “two negatives” distinction.	► Slides · Maths 1.2 Multiplying & Dividing Integers Starter: work out $-3 + -4$ and $-3 - (-4)$. Multiplying as repeated adding; the pattern ladder (question only, in pairs). Draw This: copy the four sign rules and the $\times / \div$ sign table.	The four sign rules and the sign table copied into notebooks. Students can explain why a negative $\times$ a negative is positive.

Tuesday 11 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.2 Animal Cells. Name the parts of an animal cell and how it differs from a plant cell; learn the microscope method.	► Slides · Science 1.2 Animal Cells Starter: parts of a plant cell beginning with “c” (organelles vs substances). Parts of an animal cell (Draw This); spot the difference, plant vs animal. “Similar is not the same”; Plant-or-Animal photographs; the stain and slide-prep method.	7 written items and 1 labelled drawing in the notebook. Students decide plant vs animal from a photograph, with a reason.
Mathematics 10:45 – 11:35	Unit 1.2, Day 2. Consolidate multiplying and dividing; brackets first; estimating.	Team game: pairs of integers with a product of –24. Work-backwards questions; brackets first, and the addition-inside-brackets trap. Estimating by rounding; word problems (the bank fee, the dive, the durian).	Students work the brackets first and estimate to check. Homework set: Workbook 1.1 & 1.2, pp. 7–11.

Wednesday 12 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.3 Specialised Cells, Day 1. Function, specialised and adapted; the three specialised animal cells.	► Slides · Science 1.3 Specialised Cells Starter: finish the four sentences (cell membranes..., a nucleus...). Key words: function, specialised, adapted. Red blood cell, neurone and ciliated cell — drawn diagrams paired with real micrographs; Questions 1 and 2.	Key words copied and the three animal cells described. Students notice that a red blood cell has no nucleus.
Mathematics 10:45 – 11:35	Unit 1.3 Lowest Common Multiples, Day 1. Multiple, common multiple, LCM; “common” means shared.	► Slides · Maths 1.3 Lowest Common Multiples Starter: the multiples of 4 and of 6; the flashing-lights hook. “Common” means shared, not ordinary; common multiples lead to the lowest common multiple. Draw This: Mr Bowen’s list method, the LCM of 6 and 9.	Three definitions and the LCM method copied. Students find the LCM of two numbers by listing.

Thursday 13 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.3, Day 2. The two specialised plant cells; structure fits function; build the summary table.	Root hair cell (absorbs water; why it has no chloroplasts) and palisade cell (photosynthesis); real plant micrographs. Drill the sentence frame: “adapted to _____ because it has _____.” Draw This: the structure–function table; recall quiz across the five cells.	All five cells entered in the structure–function table. Students use the “adapted because” frame in full sentences. Homework: read pp. 17–21; finish the table; Questions 1–4.
Mathematics 10:45 – 11:35	Unit 1.3, Day 2. Consolidate LCM; the “don’t just multiply” trap; word problems.	LCM-finder drill; the trap that the LCM of 4 and 8 is 8, not 32. Word problems: the two buses, the barbecue packs, the two taps, the two alarms.	Students know the LCM is usually smaller than the product. Homework set: Exercise 1.3, pp. 12–13.

Friday 14 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Consolidating Units 1.2 and 1.3 independently. Recall at speed.	Workbook 1.2 & 1.3 – continue and complete, circulating and supporting.	Completed Workbook 1.2 & 1.3 pages.
Mathematics 10:45 – 11:35	Jeopardy review game. Review Unit 1 (integers and multiples, 1.1–1.3) in teams.	➤ Slides · Jeopardy – Mathematics 1.1–1.3 board Teams of 3–4. Categories: Adding & Subtracting, Multiplying & Dividing, Word Problems, Lowest Common Multiple, and “The English of the Question.” A team must show the calculation, not just the answer, to score; point values rise down each column. Mr Bowen hosts; a scorekeeper each round; a wagered final question. Close by recapping the two ideas that caught teams out.	Teams show the calculation, not just the answer. Every student contributes at least one answer. The class can state the sign rules and how to find an LCM.

Week 3 · 17–21 August 2026

Day	Science · 8:45 – 9:35	Mathematics · 10:45 – 11:35
Monday 17	Jeopardy review of Unit 1.1–1.3, before starting 1.4.	Unit 1.4 Highest Common Factors, Day 1.
Tuesday 18	Unit 1.4 Cells, Tissues and Organs — the five-level ladder.	Unit 1.4, Day 2 — the consecutive-numbers investigation.
Wednesday 19	Unit 1.4, Day 2 — the organ relay; completing the ladder.	Unit 1.5 Tests for Divisibility, Day 1 — the nine tests.
Thursday 20	Lab: safety and skills — estimating, weighing, and the scalpel.	Unit 1.5, Day 2 — the shuffle investigation.
Friday 21	Jeopardy review across Unit 1.1–1.4.	Consolidating 1.5 — Workbook, then Around the World.

► Links for this week

Teacher plan · Maths 1.4

► Slides · Maths 1.5 Tests for Divisibility

Teacher plan · Maths 1.5

► Slides · Jeopardy — Monday and Friday

Homework: [Packet 3 · Factors, Tests and Tissues](#) — due Monday 24 August.

Homework: [Extra sheet 3 · The Two That Do the Work](#) — goes out with Packet 3.

Parent update · Friday 21 August

THIS WEEK

Science — Unit 1.4: Tissues & Our First Lab

We wrapped up Unit 1 looking at how cells group into tissues, then ran our first lab of the year to test our lab safety and measuring skills. Students carefully measured out the most vital powder in science (coffee), then practised safely slicing the thinnest possible layers of onion epidermis. We closed out the week with a round of Review Jeopardy.

► Slides · Science 1.4 Cells, Tissues and Organs

https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_4

Maths — Highest Common Factors & Tests for Divisibility

We worked through factors, finding Highest Common Factors, and practised quick shortcut rules to test if large numbers divide cleanly by 3, 4, 9, or 11.

► Slides · Maths 1.4 Highest Common Factors

https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_4

► Slides · Maths 1.5 Tests for Divisibility

https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_5

These links open the same slides we used in class. Students can click through them at home to review.

NEW: THE READING CHALLENGE

We're launching our reading challenge! Every completed book gets added to our classroom reading wall. Encourage your child to pick books they actually want to read — building the habit of finishing matters more than the title.

NEXT WEEK

Science

Unit 1 review, followed by a lab exploring the practical difference between accuracy and precision.

Maths

Finishing Unit 1 with exponents, then moving directly into our whole-unit review.

HOMEWORK

Homework Packet 3 covers our work with factors, divisibility tests, and cell tissues. Due **Monday** at the start of class.

[Packet 3 · Factors, Tests and Tissues](#)

[Extra sheet 3 · The Two That Do the Work](#)

If a student doesn't finish the packet, they may get an additional fundamentals packet for extra practice.

Thank you,
Mr Bowen

Monday 17 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Consolidating Unit 1 (1.1–1.3) before starting 1.4.	► Slides · Jeopardy – Science 1.1–1.3 board Teams of 3–4; categories drawn from cells, specialised cells, and the vocabulary from each lesson. Mr Bowen hosts; a scorekeeper each round.	Teams answer correctly across all three specialised-cell topics. The class can name the two ideas the game caught them out on.
Mathematics 10:45 – 11:35	Unit 1.4 Highest Common Factors, Day 1. Find the factors of a number and the highest common factor of two numbers by listing; tell a factor apart from a multiple.	► Slides · Maths 1.4 Highest Common Factors Starter: pairs multiplying to 12 and to 18, building the two factor lists. Hook: 24 pencils and 40 stickers into identical packs – guesses only, answered later in the lesson. Factor vs multiple – the distinction this lesson turns on. Draw This: HCF of 24 and 80 by listing, Mr Bowen's method. The “never none” trap: HCF(8, 9) is 1, not none; HCF(6, 18) is 6, not 1.	Common factors and the HCF found correctly by listing. Students can say a factor “divides in and the list stops” while a multiple “is landed on and never stops.” Both trap questions answered correctly on mini-whiteboards.

Tuesday 18 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.4 Cells, Tissues and Organs.	► Slides · Science 1.4 Cells, Tissues and Organs Starter: draw and label a body outline — brain, heart, stomach, intestines, lungs — then stand and point to each on themselves. Hook: could one ciliated cell alone keep your lungs clean? Paired guesses, then the reveal — millions, joined edge to edge. Copy the definitions of tissue and organ; everyday “tissue” vs the scientific word. Draw This: the five-level ladder, cell to tissue to organ to organ system to organism, one example carried all the way up.	Tissue and organ defined correctly, including the students' own “a tissue” vs “tissue” sentence pair. Five-level ladder completed with a consistent example. Fingers-up drill: correct answers on the two deliberate traps (a leaf is an organ, not a tissue; the palisade layer is a tissue, not an organ).
Mathematics 10:45 – 11:35	Unit 1.4, Day 2. Consolidating factors and the highest common factor.	Team game: HCF-finder pairs against the clock. Workbook 1.4, pp. 14–15 — the ribbons, the bookshelf, and the consecutive-numbers investigation. Recap the “never none” trap before independent work begins.	HCF found by listing without prompting. Conjecture stated correctly: the HCF of two consecutive numbers is always 1. Homework set: Workbook 1.4, pp. 14–15.

Wednesday 19 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1.4, Day 2. Consolidating tissues, organs, organ systems and organisms.	Organ relay in groups of four: one organ each, out loud, in English, no repeats. Workbook 1.4 – complete the five-level ladder; Question 3 run as a hunt through the notebook. Recap the breathing and digestive systems, and the organs each shares.	Organ relay: at least ten organs named correctly as a class. Completed Workbook 1.4 pages. Students can place one example correctly on all five rungs of the ladder.
Mathematics 10:45 – 11:35	Unit 1.5 Tests for Divisibility, Day 1. Test a number for divisibility by 2, 3, 4, 5, 6, 8, 9, 10 and 11 without dividing.	► Slides · Maths 1.5 Tests for Divisibility Starter: which of 24, 35, 90, 91 divide by 2? By 5? – noticing they already know two tests. Hook: 3960 against every number from 2 to 11 – guesses only, paid back one test at a time. “6 is a factor of 24”, “24 is divisible by 6”, “24 is a multiple of 6” – one fact, three sentences. The nine tests, copied one at a time, each checked against 3960. Where is 7? – the number with no easy test, and why. Factor Hunt widget: 1908, 2530, 7128, calling out which test to run.	All nine tests copied and correctly applied to 3960. Students turn one division fact into all three sentences (factor of / divisible by / multiple of). Students can explain why 7 has no test, rather than assuming their notes are incomplete.

Thursday 20 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Lab: safety and skills. Practising measuring and cutting safely – two techniques used all year.	Measuring coffee grounds: eyeball and estimate 10 g first, then weigh accurately on a scale and compare. Scalpel technique: cut the thinnest possible layer of onion epidermis, safe hand position, blade always cutting away from fingers.	Estimated mass compared honestly against the measured mass, in a full sentence. Onion epidermis cut thin enough to see through, using correct scalpel grip. Every student can state the two safety rules from memory.
Mathematics 10:45 – 11:35	Unit 1.5, Day 2. Consolidating the nine divisibility tests.	Rapid-fire test drill: a number on the board, hands up with the test that applies. Workbook 1.4 & 1.5, independent practice. The shuffle investigation: an arrangement of 8, 3, 6, 1 that fails divisibility by 9 – there isn't one, and why.	Students say the test out loud, not just the answer – “the digits add to 18, so it divides by 9.” Completed Workbook 1.4 & 1.5 pages.

Friday 21 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Consolidating Unit 1 (1.1–1.4) – recall at speed.	► Slides · Jeopardy – Science 1.1–1.3, with 1.4 recap questions added Teams of 3–4; Mr Bowen hosts; a wagered final question. Close by recapping the two ideas that caught teams out.	Teams show correct answers across cells, specialised cells, and tissues/organs. The class can state the five-level ladder from memory.
Mathematics 10:45 – 11:35	Consolidating tests for divisibility. Recall at speed.	Workbook 1.5 – pages taken from the class folders, worked independently. “Around the World” with divisibility questions if time allows.	Completed Workbook 1.5 pages. Correct answers at speed in Around the World.

Week 4 · 24–28 August 2026

Day	Science · 8:45 – 9:35	Mathematics · 10:45 – 11:35
Monday 24	Unit 1 test prep – building the class list of sticking points.	Unit 1.6 Square Roots & Cube Roots, Day 1.
Tuesday 25	End-of-Unit 1 Test (1.1–1.4).	Unit 1.6, Day 2 – trapping a root between two whole numbers.
Wednesday 26	Independent review practice; the five key words on a poster.	Consolidating 1.6 – Workbook, then recall at speed.
Thursday 27	Lab: accuracy vs precision.	End-of-Unit 1 Test (1.1–1.6).
Friday 28	Plant a seedling; build the classroom planter.	Around the World across the whole of Unit 1.

- Slides · Maths 1.6 Square Roots & Cube Roots

Teacher plan · Maths 1.6

Homework: [Packet 4 · Divisibility and Roots](#) – due Thursday 3 September, at the start of class.

Parent update · Friday 28 August

THIS WEEK

Science – Unit 1 Review & Accuracy Precision Lab

We finished Unit 1 with a short Cambridge assessment covering cells, tissue, and specializations! Additionally, students did three stations during lab time to test their ability to measure with both accuracy and precision. Then on Friday, we made our hanging classroom garden.

- Slides · Science: Accuracy and Precision Lab
https://bowenpra.github.io/classroom/#/lesson/y7-science/U00_2

Mathematics – Unit 1 Review & Cubes and Squares

We explored squares, cubes, and roots. Then we ended the week with a Cambridge assessment.

- Slides · Maths 1.6 Square Roots & Cube Roots

https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_6

These links open the same slides we used in class. Students can click through them at home to review.

THE READING CHALLENGE UPDATE

Every student in the class has finished at least one book since our challenge started last week. We are quickly decorating our wall with all the books finished!

HOMEWORK PACKET 4

Due **Thursday**, at the start of class. Please note: any student who does not complete the packet may receive an additional fundamentals packet for extra practice. This week's packet is shorter due to the class participation in the reading challenge.

[Packet 4 · Divisibility and Roots](#)

NEXT WEEK (NO SCHOOL MONDAY, TUESDAY, & WEDNESDAY)

We have three days holiday this week. Due to the extended time off, I have made online work for the students to do, reviewing the first mathematics unit. This is entirely optional as some students have asked for extra review. Every student has already signed in to this online portal, but please reach out if you need help.

Thank you,
Mr Bowen

Monday 24 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1 test prep – getting ready for tomorrow's test.	Students revisit notebooks and workbook pages from 1.1–1.4. Build a class list of the five key words that come up most (cell, organelle, tissue, organ, organism) and one sticking point each. Pairs quiz each other from their own notes.	A class-generated list of sticking points to target on Tuesday. Students can define at least three of the five key words unprompted.
Mathematics 10:45 – 11:35	Unit 1.6 Square Roots & Cube Roots, Day 1. Square and cube a number, and find a square root and cube root from two learned lists.	► Slides · Maths 1.6 Square Roots & Cube Roots Starter: 7×7 and $2 \times 2 \times 2$ on whiteboards. Hook: 225 paving stones in a perfect square – how many along one side? Guesses only. Draw This: the twelve square numbers and the six cube numbers, copied in full. Squaring and rooting as “there and back”; 5^2 against 5×2, the trap that costs marks. Worked example widget: the book's own Worked Example 1.6.	Twelve squares and six cubes copied correctly. Students can find a square or cube root from the list without a calculator. 5^2 read correctly as “five squared”, not “five times two.”

Tuesday 25 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	End-of-Unit 1 Test — cells, specialised cells, tissues and organs (1.1–1.4).	Papers face down, silence. Hands up to have a word READ aloud — never explained. Students who finish early check their answers over, then read quietly. Marked and returned before Unit 2 begins.	Completed end-of-unit test for every student. Marks recorded against 1.1–1.4; gaps flagged before Unit 2.
Mathematics 10:45 – 11:35	Unit 1.6, Day 2. Consolidating squares, cubes and roots.	Team game: name the square or cube root against a timer. Workbook 1.6, independent practice — trapping a non-whole root between two consecutive whole numbers. Recap “consecutive” and why it matters for Exercise 1.6.	Roots trapped correctly between two consecutive whole numbers. Homework set: Exercise 1.6, pp. 17–19.

Wednesday 26 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Consolidating Unit 1 through independent review practice.	Workbook Unit 1 review pages, worked independently, circulating and supporting. Students who finish early write one full-sentence definition for each of the five key words on a poster.	Completed Unit 1 review workbook pages. Five correct, full-sentence definitions per poster.
Mathematics 10:45 – 11:35	Consolidating Unit 1.6. Recall at speed.	Workbook 1.6 – pages taken from the class folders, worked independently. Rapid-fire recall: squares and cubes against a 2-minute timer.	Completed Workbook 1.6 pages. Correct answers at speed in the recall drill.

Thursday 27 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Lab: accuracy vs precision.	Define accuracy (how close to the true value) and precision (how close repeated measurements are to each other), with a target diagram. Skills stations: repeat measurements and plot results as accurate/precise, accurate/imprecise, inaccurate/precise, inaccurate/imprecise. Each group writes one full sentence explaining which of their own measurements were accurate, precise, both, or neither.	Correct classification of results against the target diagram. One full, correct sentence per group distinguishing accuracy from precision.
Mathematics 10:45 – 11:35	End-of-Unit 1 Test — integers, factors and multiples, divisibility, square and cube roots (1.1–1.6).	Calculators not allowed. Papers face down, silence. Hands up to have a word READ aloud — never explained. Marked and returned before Unit 2 begins.	Completed end-of-unit test for every student. Marks recorded against 1.1–1.6; gaps flagged before Unit 2.

Friday 28 August

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Plant a seedling; build a classroom planter. Apply what we know about roots and root hair cells; care for a living thing.	Recap: roots and root hair cells absorb water from the soil (links to 1.3). Each student plants a seedling in soil in their own pot. Build a shared classroom planter; label every pot with a name and today's date. Agree a watering rota and write it on the board. Each student writes one full sentence: what a seedling needs to grow.	Every student has a planted, labelled seedling. A watering rota is agreed and displayed. Each student writes what a plant needs, in a full English sentence.
Mathematics 10:45 – 11:35	Consolidating Unit 1 (1.1–1.6). Recall at speed.	“Around the World” with questions spanning all of Unit 1 — integers, multiples, factors, divisibility, roots. Mr Bowen hosts; correct and fast beats correct and slow.	Correct answers at speed in Around the World, across the full range of Unit 1 topics.

Week 5 · 31 August–4 September 2026

Day	Science · 8:45 – 9:35	Mathematics · 10:45 – 11:35
Mon 31 – Wed 2	No school – National Day holiday. Optional Unit 1 review on the Dashboard.	
Thursday 3	Unit 1 review – the five key words, and the questions the test caught.	Unit 1 drills – integers, factors and multiples, roots, at speed. Packet 4 in.
Friday 4	Mid-Autumn Festival prep – booth ideas and crafts for Friday 25 September.	Squish toys from nets of 3D shapes; Unit 1 drills to finish. Packet 5 out.

► Links for this week

► [Slides · Science 1.4 Cells, Tissues and Organs](#) (review)
 ► [Slides · Maths 1.6 Square Roots & Cube Roots](#) (review)
[Dashboard · optional Unit 1 review online](#)

Homework: [Packet 5 · Unit 1, All of It](#) – out Friday 4 September, due Thursday 10 September.

Homework: [Extra sheet 5 · Bring Down the Next Digit](#) – goes out with Packet 5.

Parent update · Friday 4 September

Two things to fix next time

The sent post does not say which period the Mid-Autumn project time used; the day page puts the booth planning in Science and the nets in Mathematics, which is a guess. The post also linked the packet by its direct PDF address (`assets/hw05-...pdf`), which changes on every deploy – the shelf link below is the one that lasts.

Science – Unit 1 Review

A short week back from the holiday, so we used the extra time for more Unit 1 review.

Mathematics – Unit 1 Drills

We did more Unit 1 math drills to keep skills sharp after the break.

MID-AUTUMN FESTIVAL PREP BEGINS

We started project time for our upcoming Mid-Autumn Festival on Friday the 25th! Students discussed business ideas and crafts for their booths, and some made squish toys using net diagrams of 3D shapes.

HOMEWORK

Due Thursday at the start of class.

[Packet 5 · Unit 1, All of It](#)

NEXT WEEK

We start Unit 2 in both Math and Science! We'll also have lab next Thursday.

Thank you,
Mr Bowen

Thursday 3 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 1 review after the holiday. Recall the five key words and the ideas the Unit 1 test caught.	Starter: define cell, organelle, tissue, organ, organism from memory, then check against the notebook. Go over the test questions the class lost most marks on; reteach on the board. Pairs quiz each other from Workbook 1.1–1.4; Around the World to finish.	Five key words defined correctly, unprompted. The two weakest test questions answered correctly on whiteboards.
Mathematics 10:45 – 11:35	Unit 1 drills after the holiday. Recall at speed across 1.1–1.6.	Packet 4 collected at the start of class. Rapid-fire rounds on whiteboards: integer sums and products, LCM and HCF by listing, divisibility tests, squares and cubes. Reteach any round where more than a third of boards are wrong.	Packet 4 in from every student; missing packets noted. Correct answers at speed in every round.

Friday 4 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Mid-Autumn Festival prep, session 1. Plan a booth: a product or craft, and who does what.	Explain the festival day (Friday 25 September) and what a booth needs. Groups brainstorm business ideas and crafts; one idea agreed per group. Each group lists materials, jobs and a price in full English sentences.	One booth plan per group with a product, a materials list and named jobs.
Mathematics 10:45 – 11:35	Nets of 3D shapes, applied. Finish the Unit 1 drills; set Packet 5.	Squish toys: cut, fold and stuff a net of a cube or cuboid; name the faces, edges and vertices while building. Remaining Unit 1 drill rounds for anyone not building. Packet 5 and Extra sheet 5 handed out — due Thursday 10 September.	A finished squish toy from a correct net. Every student has Packet 5 with the due date written on it.

Week 6 · 7–11 September 2026

Day	Science · 8:45 – 9:35	Mathematics · 10:45 – 11:35
Monday 7	Unit 2.1a Solids, Liquids and Gases — properties, the two syringes, the Word Wall.	Unit 2.1 Constructing Expressions — a letter for a number you cannot count.
Tuesday 8	Unit 2.1b Particle Theory — three arrangements; you are the particles.	Unit 2.1, Day 2 — the four phrases; Workbook 2.1.
Wednesday 9	Unit 2.2a Changes of State — the five changes, verb and noun; the particle model.	Unit 2.2 Using Expressions and Formulae — substituting; the hidden times sign.
Thursday 10	Unit 2.2b Measuring, and Heating Water — meniscus, thermometer, the heating curve. Packet 5 in.	Unit 2.2, Day 2 — formulae with two letters; Workbook 2.2. Packet 6 out.
Friday 11	Task: The Formula Machine, Part 1 — temperature scales and the distance to a storm.	Task: The Formula Machine, Part 2 (the pour), then Girl Math.

Homework: [Packet 6 · Letters and Particles](#) — out Thursday 10 September, due Monday 14 September.

Homework: [Extra sheet 6 · One Letter at a Time](#) — goes out with Packet 6.

Parent update · Friday 11 September

Friday's two periods

Friday is recorded as the Formula Machine in Science (its formulae are the thermometer and the storm) and the pour plus Girl Math in Mathematics. If the split was different, change the two Friday rows; the post below does not depend on it.

SCIENCE – UNIT 2: SOLIDS, LIQUIDS AND GASES

We started Unit 2 this week. Students learned the properties of solids, liquids and gases, and the particle theory that explains them: everything is made of tiny particles, and how they are arranged decides whether something keeps its shape, pours, or can be squashed. Then we moved on to changes of state (melting, freezing, evaporating, boiling and condensing) and practised measuring volume and temperature the way a scientist does.

► Slides · Science 2.1a Solids, Liquids and Gases

https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_1a

► Slides · Science 2.1b Particle Theory

https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_1b

► Slides · Science 2.2a Changes of State

https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_2a

► Slides · Science 2.2b Measuring, and Heating Water

https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_2b

New this week: an interactive particle model. Heat or cool ice, mercury, oxygen or iron and watch the particles change state. Students can try it at home.

► Slides · Heating & Cooling: A Particle Model

https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_model_states

MATHS – UNIT 2: EXPRESSIONS AND FORMULAE

We started algebra. Students learned to use a letter for a number we don't know yet, to write expressions like $c - 50$ and $3n$, and to substitute a number into an expression or a formula. The hardest part is the English: “3 less than t ” is $t - 3$, not $3 - t$.

► Slides · Maths 2.1 Constructing Expressions

https://bowenpra.github.io/classroom/#/lesson/y7-math/U02_1

► Slides · Maths 2.2 Using Expressions and Formulae

https://bowenpra.github.io/classroom/#/lesson/y7-math/U02_2

On Friday we did two tasks. The Formula Machine: running real formulas, such as converting Celsius to Fahrenheit, finding the distance to a storm from the gap between the flash and the thunder, and working out the depth of water in a tank. Girl Math: shar-

ing pieces of rice paper by rules like “twice as many as” and “3 more than”, solved with algebra against the clock.

► Slides · Task: The Formula Machine

https://bowenpra.github.io/classroom/#/lesson/y7-math/T01_formula-machine

► Slides · Task: Girl Math

https://bowenpra.github.io/classroom/#/lesson/y7-math/T02_girl-math

ONLINE DASHBOARD (OPTIONAL)

The online Dashboard is now updated through Maths 2.2 and Science 2.2. This is optional, but if your child gets stuck on the homework, Science 2.1 and 2.2 on the Dashboard are the best place to look first.

<https://bowenpra.github.io/Dashboard/>

Login: student name

Code: last 3 digits of the student email

HOMEWORK – PACKET 6

Due **Monday 14 September** at the start of class. It covers this week's Maths and Science. The last page is a challenge that joins the two subjects together (volume). It is okay if students cannot finish that page – they should try it and show their working.

[Packet 6 · Letters and Particles](#)

NEXT WEEK

Science

Unit 2 continues: using the particle model to explain what happens during a change of state.

Maths

Unit 2 continues: collecting like terms and simplifying expressions.

Thank you,
Mr Bowen

Monday 7 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 2.1a Solids, Liquids and Gases. Sort a substance by what it does, not how it looks; list the properties of each state; use hypothesis and theory correctly.	► Slides · Science 2.1a Solids, Liquids and Gases Starter: two solids, two liquids, two gases in the notebook. Hook: is sand a liquid? Guesses only; answered after the properties. Copy matter, states of matter, property; one state at a time with a copy-down panel each. The two syringes – predict which plunger moves, then push. Draw This: the four-question table, ruled; Questions 1–7. Page 30: hypothesis, theory, particle; the kitchen-smell question left open for tomorrow. Word Wall (solid / liquid / gas puzzle) if time allows.	Table ruled and ticked correctly for all three states. Students say sand is a solid that pours, and why only a gas compresses. Hypothesis and theory defined in the notebook.
Mathematics 10:45 – 11:35	Unit 2.1 Constructing Expressions. Use a letter for a number you cannot count; leave $c - 50$ unfinished; write $3s$; read “less than” and “subtract from” correctly.	► Slides · Maths 2.1 Constructing Expressions Starter: how many particles in one drop of water? (science bridge – nobody can write the number, and that is the point). Name it: let n represent the number; first copy-down panel. The wall: the coffee table where the third row cannot finish – $c - 50$ is the answer. Notation: $3 \times s$ is written $3s$. The four phrases: more than, less than, times, subtract from; the order flips for “h less than t”. “Subtract the result from 25” is $25 - 3n$.	Eight copy-down panels in the notebook. “h less than t” written $t - h$ on whiteboards. $c - 50$ accepted as a finished answer.

Tuesday 8 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 2.1b Particle Theory. Describe the particle arrangement in each state and use it to explain pouring, compressing and a vacuum.	► Slides · Science 2.1b Particle Theory Starter: three things a gas can do that a solid cannot, books closed. Yesterday's kitchen-smell question, then the ink in water. Copy the theory: all matter is made of particles, arranged differently. Three arrangements, one copy-down panel each; everyone stands and becomes the particles. Page 33: why water pours and a brick does not; vacuum. The sponge: a solid you can squash — where the air goes. Draw This: the three-box activity; recap and homework.	Three particle diagrams drawn correctly with properties beside them. Students explain the sponge without saying a solid compresses.
Mathematics 10:45 – 11:35	Unit 2.1, Day 2. Consolidate constructing expressions; the four phrases at speed.	Team game: an English phrase on the board, the expression on whiteboards, against a timer. Workbook 2.1 — independent practice, circulating. Recap “less than” and “subtract from” before independent work.	Expressions written correctly for all four phrase types. Completed Workbook 2.1 pages.

Wednesday 9 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 2.2a Changes of State. Name the five changes as journeys from one state to another; verb and noun for each; melting and boiling points of water.	► Slides · Science 2.2a Changes of State Starter: draw the three particle pictures from memory. Hook: an ice cube becomes a puddle, the puddle disappears — where did the water go, twice? The from-to frame; the five changes one at a time, with the particle model widget showing each one as it happens. The verb / noun pairs (melt / melting); Draw This. Activity 2.2.1 in pairs with the change cards.	Five changes named as from-to sentences with the right verb and noun. 0 and 100 degrees given as water's melting and boiling points. Students distinguish evaporating from boiling.
Mathematics 10:45 – 11:35	Unit 2.2 Using Expressions and Formulae. Substitute a number for a letter; $3n$ with $n = 4$ is 12, never 34; keep the order of operations; know what a formula is.	► Slides · Maths 2.2 Using Expressions and Formulae Starter: the cup from 2.1, now $c = 320$ — the row finishes. Substitute and value; the football substitution. The wall: the hidden times sign — $3n$ is $3 \times n$. $3x + 2$ with $x = 4$: 14 or 18? Show of hands, then the reason. Formula: an expression has no equals sign, a formula does; $A = lw$. The minus sign travels with its number — use brackets. The taxi formula: build one, then break one.	Seven copy-down panels in the notebook. $3n$ with $n = 4$ gives 12 on every whiteboard. Students say when a formula stops being true.

Thursday 10 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Unit 2.2b Measuring, and Heating Water. Read a measuring cylinder and a thermometer correctly; plan and run the heating-water investigation; plot and describe the heating curve.	Packet 5 collected at the start of class. ➤ Slides · Science 2.2b Measuring, and Heating Water Starter: guess three temperatures in degrees C. Hook: two students read the same cylinder as 50 and 47 — who is right? The meniscus: read the bottom at eye level; the thermometer: read the top at eye level. Copy both. Predict, then safety; Draw This: the apparatus, bulb in the water. The investigation, reading every minute; plot temperature against time; the particle model at the boiling point.	Packet 5 in from every student; missing packets noted. Cylinder and thermometer read correctly on the two check questions. A plotted heating curve, and the sentence: it rises, then stays at the boiling point.
Mathematics 10:45 – 11:35	Unit 2.2, Day 2. Consolidate substituting; formulae with two letters; set Packet 6.	Team game: substitute against the timer — $3n$, $3n + 2$, $25 - 3n$. Workbook 2.2 — independent practice, circulating. Recap the hidden times sign and the travelling minus before independent work. Packet 6 and Extra sheet 6 handed out — due Monday 14 September; say that Section C is a challenge.	Completed Workbook 2.2 pages. Every student has Packet 6 with the due date written on it.

Friday 11 September

Subject	Learning Objective / Focus	Main Activities	Evidence of Learning
Science 8:45 – 9:35	Task: The Formula Machine, Part 1 – formulae from Science. Run a formula in three lines: write it, put the numbers in, work it out.	► Slides · Task: The Formula Machine Starter: the ant walks round the rectangle – 22. The three-line routine, copied; the middle line is where the marks are. Station 1, perimeter; Station 2, area of a triangle – the height is the dashed line. The argument: 35 degrees C and 95 degrees F are the same temperature – link to Thursday's thermometer. Station 4, the storm: flash first, then the bang; $d = t$ divided by 3.	Every problem worked in three lines, not one. Station 3: 35 degrees C converted to 95 degrees F, with the working. Students say why the flash arrives before the bang.
Mathematics 10:45 – 11:35	Task: The Formula Machine, Part 2, then Task: Girl Math. Find the letter that was not given by counting cubes; write “twice as many” and “3 more than” as expressions and solve.	The pour: water from one tank into another with a different base – deeper, shallower or the same? Real water first, then the widget. ► Slides · Task: Girl Math Twice as many is $2n$; 3 more than is $n + 3$; the four steps. The game: teams, ten rounds, read each round aloud in English before the clock runs. Exit question: 34 pieces, Su three times Ana, Tess 4 more than Ana.	Depth found by counting cubes, not by rearranging. Every share written as an expression before the total is used. Exit question solved by at least half the class.
