

# Year 7 Mathematics & Science

## Lesson Plan • Quarter 1, Weeks 1–8

4 August – 25 September 2026

---

Mr Bowen • Cambridge Lower Secondary, Stage 7

### ➤ How to use this document

Every coloured entry is a live link. The contents page jumps to any week or day; [blue](#) links open the deployed site — the slides the class saw, the one-page teacher plan, or the homework shelf.

Each week is one overview page (the week at a glance, every link, and the Friday parent update as it went out) followed by one page per teaching day, so a single day can be printed and written on. Orange boxes are notes to the teacher, never part of a post.

Timetable: Science 8:45–9:35, Mathematics 10:45–11:35.

# Contents

## Week 1 · 4–7 August 2026

|                                 |   |
|---------------------------------|---|
| Overview and links              | 3 |
| Parent update – Friday 7 August | 3 |
| Tuesday 4 August                | 5 |
| Wednesday 5 August              | 6 |
| Thursday 6 August               | 7 |
| Friday 7 August                 | 8 |

## Week 2 · 10–14 August 2026

|                                  |    |
|----------------------------------|----|
| Overview and links               | 9  |
| Parent update – Friday 14 August | 9  |
| Monday 10 August                 | 11 |
| Tuesday 11 August                | 12 |
| Wednesday 12 August              | 13 |
| Thursday 13 August               | 14 |
| Friday 14 August                 | 15 |

## Week 3 · 17–21 August 2026

|                                  |    |
|----------------------------------|----|
| Overview and links               | 16 |
| Parent update – Friday 21 August | 16 |
| Monday 17 August                 | 18 |
| Tuesday 18 August                | 19 |
| Wednesday 19 August              | 20 |
| Thursday 20 August               | 21 |
| Friday 21 August                 | 22 |

## Week 4 · 24–28 August 2026

|                                  |    |
|----------------------------------|----|
| Overview and links               | 23 |
| Parent update – Friday 28 August | 23 |
| Monday 24 August                 | 25 |
| Tuesday 25 August                | 26 |
| Wednesday 26 August              | 27 |

|                    |    |
|--------------------|----|
| Thursday 27 August | 28 |
| Friday 28 August   | 29 |

## Week 5 · 31 August–4 September 2026

|                                    |    |
|------------------------------------|----|
| Overview and links                 | 30 |
| Parent update – Friday 4 September | 30 |
| Thursday 3 September               | 31 |
| Friday 4 September                 | 32 |

## Week 6 · 7–11 September 2026

|                                     |    |
|-------------------------------------|----|
| Overview and links                  | 33 |
| Parent update – Friday 11 September | 33 |
| Monday 7 September                  | 35 |
| Tuesday 8 September                 | 36 |
| Wednesday 9 September               | 37 |
| Thursday 10 September               | 38 |
| Friday 11 September                 | 39 |

## Week 7 · 14–18 September 2026

|                        |    |
|------------------------|----|
| Overview and links     | 40 |
| Monday 14 September    | 41 |
| Tuesday 15 September   | 42 |
| Wednesday 16 September | 43 |
| Thursday 17 September  | 44 |
| Friday 18 September    | 45 |

## Week 8 · 21–25 September 2026

|                        |    |
|------------------------|----|
| Overview and links     | 46 |
| Monday 21 September    | 47 |
| Tuesday 22 September   | 48 |
| Wednesday 23 September | 49 |
| Thursday 24 September  | 50 |
| Friday 25 September    | 51 |

## Week 1 · 4–7 August 2026

| Day                | Science · 8:45 – 9:35                                                      | Mathematics · 10:45 – 11:35                                             |
|--------------------|----------------------------------------------------------------------------|-------------------------------------------------------------------------|
| <b>Tuesday 4</b>   | Day One. Stage 6 topics that return in Stage 7; using a Table of Contents. | Day One. Class expectations, the weekly schedule, setting up equipment. |
| <b>Wednesday 5</b> | Unit 1.1 Plant cells, Part 1 — cell, organelle, and the scale of a cell.   | Stage 6 diagnostic — baseline of what carries over from Year 6.         |
| <b>Thursday 6</b>  | Unit 1.1 Plant cells, Part 2 — the organelles, and what a microscope does. | Unit 1.1 Adding and subtracting integers.                               |
| <b>Friday 7</b>    | Consolidating 1.1 — Workbook, and the scale-of-a-cell video.               | Consolidating 1.1 — Workbook, then Around the World.                    |

### ► Links for this week

► Slides · Day One: Welcome to Year 7

► Slides · Science 1.1 Cells

Teacher plan · Science 1.1

► Slides · Maths 1.1 Adding & Subtracting Integers

Teacher plan · Maths 1.1

Homework: [Packet 1 · Integers and Cells](#) — out Thursday 6 August, due Monday 10 August.

## Parent update · Friday 7 August

Welcome to our Google Classroom! I'll post a short update here every Friday, so you always know what we covered that week, what's coming up next, and what homework is due — all in the post itself, so there's nothing else to open.

### FAMILY NOTEBOOKS

Every student carries a Family Notebook home. It holds their homework and any notes from me, so please look through it with your child each week and sign it. The Friday post and the notebook say the same thing — just one on the screen and one on paper.

### THIS WEEK

#### Science — Unit 1.1: Cells, The Building Blocks of Life

We learned that every living thing is made of cells, that cells are too small to see without a microscope, and the names of the main parts inside one.

► Slides · Science 1.1 Cells

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U01\\_1](https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_1)

#### Maths — Unit 1.1: Adding and Subtracting Integers

We added and subtracted positive and negative numbers on a number line, and practised turning an English sentence into a calculation.

---

► Slides · Maths 1.1 Adding & Subtracting Integers

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U01\\_1](https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_1)

These links open the same slides we used in class. Students can click through them at home to review.

### NEXT WEEK

---

#### Science

Animal cells, then specialised cells — cells with a special shape for a special job, like a red blood cell or a root hair cell.

#### Maths

Multiplying and dividing negative numbers (the sign rules), then factors — the numbers that divide exactly into another number.

I'll post these links in next Friday's update.

### HOMEWORK

---

Every student was given a paper homework packet on Thursday. It is due **Monday**, at the start of class.

#### [Packet 1 · Integers and Cells](#)

The packet has short notes at the top of each section to remind students what to do, and students can take their notebooks home too if they want extra help — our class notes cover everything in the packet. Please make sure it comes back to school on Monday, and if your child has lost theirs, just let me know and I'll print another one.

Thank you,  
Mr Bowen

## Tuesday 4 August

| Subject                             | Learning Objective / Focus                                                                                             | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Evidence of Learning                                                                                                                                                     |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Recognising Stage 6 topics that return in Stage 7.<br>Using a Table of Contents to find a topic in the Learner's Book. | Model reading the Contents page from the front — unit, topic, page number.<br>Groups scan the Year 7 Contents and pick out topics they already met in Year 6.<br>Poster: the topic name, its page number, and what they already know about it.<br>Posters shared with the room at the end.                                                                                                                                                                                                      | Poster gives a correct topic with its correct page number.<br>Students can open the book to a named topic without help.<br>Prior knowledge is written in full sentences. |
| <b>Mathematics</b><br>10:45 – 11:35 | Class expectations, the weekly schedule, and setting up equipment.<br>Students can explain the expectations at home.   | ► <a href="#">Slides · Day One, from "Your Week, Every Week"</a><br>Timetable slide — class reads the four times back: 8:00 arrival, 8:30 homeroom, 8:45 Science, 10:45 Mathematics.<br>Expectation letter, seven sections, students following on their own printed copy.<br>Distribute supplies: binder, folder, three sleeves, Learner's Book.<br>Set up: names on binder and folder; sleeves labelled Maths / Science / English; letter at the very front; taped name on the Learner's Book. | Hold-it-up check — all six items correct, checked from the front of the room.<br>Students can state their two lesson times and where the phone goes on arrival.          |

## Wednesday 5 August

| Subject                             | Learning Objective / Focus                                                                         | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Evidence of Learning                                                                                                                                                                                     |
|-------------------------------------|----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1.1 Plant cells, Part 1.<br>Define a cell and an organelle, and describe how small a cell is. | <p>► <a href="#">Slides · Unit 1.1 Cells, Part 1, up to “Parts of a Plant Cell”</a></p> <p>Starter: one full sentence describing how small a cell is.</p> <p>Soda Can Challenge — guesses first, then the numbers: 0.02 mm to 120 mm, scale factor 6000, Mr Bowen at 10.68 km against Everest at 8.85 km.</p> <p>Copy the definition of “cell”; Latin <i>cella</i>, the prison cell, Hooke’s cork drawing.</p> <p>Leaf micrograph — what are the little green circles?</p> <p>Organelle analogy, then the interactive cell diagram.</p> <p>Draw This: the plant cell from p. 9, all seven labels.</p> | <p>Scale factor and the 10.68 km answer worked out correctly on paper.</p> <p>Definitions of “cell” and “organelle” copied into notebooks.</p> <p>Labelled plant-cell drawing with all seven labels.</p> |
| <b>Mathematics</b><br>10:45 – 11:35 | Stage 6 diagnostic — baseline of what students carry over from Year 6.                             | <p>Papers face down, 40 minutes, silence.</p> <p>Hands up to have a word READ aloud — never explained.</p> <p>Students who finish early return to yesterday’s science posters.</p> <p>Marked tonight so Thursday can be pitched to it.</p>                                                                                                                                                                                                                                                                                                                                                            | <p>Marked diagnostic paper for every student.</p> <p>Gaps recorded by strand; used to set the pace for Quarter 1.</p>                                                                                    |

## Thursday 6 August

| Subject                             | Learning Objective / Focus                                                                                                                                            | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Evidence of Learning                                                                                                                                                                                  |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1.1 Plant cells, Part 2.<br>Name the shared and plant-only organelles and their jobs; explain what a microscope does and what a model cannot show.               | <p>► <a href="#">Slides · Unit 1.1 Cells, Part 2</a>, from “Every Cell Has These Four”</p> <p>The four organelles every cell has.</p> <p>Plant-only extras: cell wall, cellulose and sap vacuole; then chloroplast and chlorophyll, with real onion and pondweed.</p> <p>Plant and animal cells side by side.</p> <p>Draw This: the labelled microscope from p. 10; copy “microscope” and walk the light path.</p> <p>The electron microscope; models and their limitations.</p> <p>Begin Workbook 1.1, pages 2–3.</p>                                                                                                                                                                      | 13 definitions and 2 labelled drawings in the notebook.<br>Students can say which organelles only plants have.<br>Workbook 1.1 pp. 2–3 started.                                                       |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.1 Adding and subtracting integers.<br>Move both ways along the number line, including subtracting a negative, and turn an English sentence into a calculation. | <p>► <a href="#">Slides · Maths 1.1 Adding &amp; Subtracting Integers</a></p> <p>Team game: name the negatives against a 2-minute timer, duplicates crossed off both lists.</p> <p>Draw This: the number line. Copy “integer” and “inverse”.</p> <p>“Negative five” against “minus five” — the same dash doing two jobs.</p> <p>Jumper widget: pairs say which way the arrow will go before the button is pressed.</p> <p>Up-words and down-words, with the sentence patterns.</p> <p>“Subtract 5 from 8” and “the difference between –3 and 4” — hint, wrong answers out loud, then reveal.</p> <p>Word problems on mini-whiteboards: car park, bank account, research station, snail.</p> | 8 – 5 = 3 given with the reason — “from” marks the number you start at.<br>Difference between –3 and 4 is 7, while –3 – 4 is –7.<br>Calculation written down before the answer on every word problem. |

## Friday 7 August

| Subject                             | Learning Objective / Focus                                              | Main Activities                                                                                                                                                                               | Evidence of Learning                                                                                           |
|-------------------------------------|-------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Consolidating Unit 1.1 independently.<br>Picturing the scale of a cell. | Workbook 1.1 – continue and complete, circulating and supporting.<br>Kurzgesagt video: what a cell would be like scaled up enormously.<br>Link the video back to Wednesday's soda-can number. | Completed Workbook 1.1 section, marked.<br>Students describe one thing the video showed that a drawing cannot. |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating adding and subtracting integers.<br>Recall at speed.      | Workbook 1.1 – pages taken from the class folders, worked independently.<br>“Around the World” with integer questions if time allows.                                                         | Completed Workbook 1.1 pages.<br>Correct answers at speed in Around the World.                                 |

## Week 2 · 10–14 August 2026

| Day                 | Science · 8:45 – 9:35                                                | Mathematics · 10:45 – 11:35                                            |
|---------------------|----------------------------------------------------------------------|------------------------------------------------------------------------|
| <b>Monday 10</b>    | Peer-review Homework Packet 1 — marking a classmate's work.          | Unit 1.2 Multiplying & Dividing Integers, Day 1 — the four sign rules. |
| <b>Tuesday 11</b>   | Unit 1.2 Animal Cells — and how they differ from plant cells.        | Unit 1.2, Day 2 — brackets first, and estimating.                      |
| <b>Wednesday 12</b> | Unit 1.3 Specialised Cells, Day 1 — the three animal cells.          | Unit 1.3 Lowest Common Multiples, Day 1.                               |
| <b>Thursday 13</b>  | Unit 1.3, Day 2 — the two plant cells; the structure–function table. | Unit 1.3, Day 2 — the “don't just multiply” trap; word problems.       |
| <b>Friday 14</b>    | Consolidating 1.2 and 1.3 — Workbook, independent practice.          | Jeopardy review game — Unit 1.1 to 1.3 in teams.                       |

Homework: [Packet 2 · Signs, Multiples and Cells](#) — out Thursday 13 August, due Monday 17 August.

## Parent update · Friday 14 August

### THIS WEEK

#### Science — Unit 1.2: Animal Cells, What You Are Made Of

We named the parts of an animal cell and compared them with plant cells. The main thing to remember: animal cells have no cell wall and no chloroplasts, so they're soft and can't make their own food.

► Slides · Science 1.2 Animal Cells

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U01\\_2](https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_2)

#### Science — Unit 1.3: Specialised Cells, Built for the Job

We looked at cells with a special shape for a special job — red blood cells, nerve cells, root hair cells — and practised saying why the shape helps: “It is adapted to ... because it has ...”

► Slides · Science 1.3 Specialised Cells

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U01\\_3](https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_3)

#### Maths — Unit 1.2: Multiplying & Dividing Integers

We learned the four sign rules. The trap we spent time on: two negatives make a positive when you multiply or divide, but not when you add.  $-3 + -4$  is  $-7$ , not  $7$ .

► Slides · Maths 1.2 Multiplying & Dividing Integers

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U01\\_2](https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_2)

#### Maths — Unit 1.3: Lowest Common Multiples

We listed multiples, found the ones two numbers share, and picked the lowest. “Common” in maths means shared, not ordinary.

---

► Slides · Maths 1.3 Lowest Common Multiples

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U01\\_3](https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_3)

These links open the same slides we used in class. Students can click through them at home to review.

### NEW: LABS START THURSDAY

---

Starting Thursday 20 August, Year 7 will have a science lab every Thursday morning.

Our first lab is a Safety and Skills Lab. Before we do any real experiments, students need to know the rules of the room and how to handle the equipment, so we'll go through the safety rules, what to do if something spills or breaks, and how to measure accurately.

### NEXT WEEK

---

#### Science

Cells, tissues and organs (1.4). How cells of the same kind group into tissues, tissues into organs, and organs into systems — the heart, the lungs, the stomach. This finishes Unit 1, so we will also review the whole unit before the Unit 1 check.

#### Maths

Highest common factors (1.4), then tests for divisibility (1.5). Factors are the numbers

that divide exactly into another number. Then some quick tricks for checking whether a big number divides by 3, 4, 9 or 11 without doing the division.

I'll post these links in next Friday's update.

### HOMEWORK

---

Homework Packet 2 went home on Thursday. It is due **Monday**, at the start of class, and covers everything above — the sign rules, multiples and the LCM, plant and animal cells, and specialised cells.

#### [Packet 2 · Signs, Multiples and Cells](#)

Each section has short notes at the top to remind students what to do. Students can take their notebooks home for extra help too — our class notes cover everything in the packet. If your child has lost theirs, let me know and I'll print another one.

### FAMILY NOTEBOOKS

---

Please look through the notebook with your child this week and sign it. The Friday post and the notebook say the same thing, just one on the screen and one on paper.

Thank you,  
Mr Bowen

## Monday 10 August

| Subject                             | Learning Objective / Focus                                                                                               | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                           | Evidence of Learning                                                                                                                                          |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Peer-review Homework Packet 1 (Cells).<br>Give accurate, kind feedback on another student's work.                        | Hand the packets out so each student marks a classmate's copy – never their own.<br>Mark in coloured pencil against the answer key on the board, question by question.<br>Tick correct answers; write the correction, not just a cross, where the answer is wrong.<br>Total the score, initial the bottom, and return the packet to its owner to read.<br>Class tally of the two questions missed most often; reteach those on the board. | Each packet is marked in coloured pencil with corrections, a score and the marker's initials.<br>Students can name the two questions the class found hardest. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.2 Multiplying & Dividing Integers, Day 1.<br>Multiply and divide integers; begin the “two negatives” distinction. | ► <a href="#">Slides · Maths 1.2 Multiplying &amp; Dividing Integers</a><br>Starter: work out $-3 + -4$ and $-3 - (-4)$ .<br>Multiplying as repeated adding; the pattern ladder (question only, in pairs).<br>Draw This: copy the four sign rules and the $\times / \div$ sign table.                                                                                                                                                     | The four sign rules and the sign table copied into notebooks.<br>Students can explain why a negative $\times$ a negative is positive.                         |

## Tuesday 11 August

| Subject                             | Learning Objective / Focus                                                                                                    | Main Activities                                                                                                                                                                                                                                                                                                                   | Evidence of Learning                                                                                                         |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1.2 Animal Cells.<br>Name the parts of an animal cell and how it differs from a plant cell; learn the microscope method. | <p>► <a href="#">Slides · Science 1.2 Animal Cells</a></p> <p>Starter: parts of a plant cell beginning with “c” (organelles vs substances).</p> <p>Parts of an animal cell (Draw This); spot the difference, plant vs animal.</p> <p>“Similar is not the same”; Plant-or-Animal photographs; the stain and slide-prep method.</p> | 7 written items and 1 labelled drawing in the notebook.<br>Students decide plant vs animal from a photograph, with a reason. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.2, Day 2.<br>Consolidate multiplying and dividing; brackets first; estimating.                                         | <p>Team game: pairs of integers with a product of –24.</p> <p>Work-backwards questions; brackets first, and the addition-inside-brackets trap.</p> <p>Estimating by rounding; word problems (the bank fee, the dive, the durian).</p>                                                                                             | Students work the brackets first and estimate to check.<br>Homework set: Workbook 1.1 & 1.2, pp. 7–11.                       |

## Wednesday 12 August

| Subject                             | Learning Objective / Focus                                                                                   | Main Activities                                                                                                                                                                                                                                                                                                   | Evidence of Learning                                                                                            |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1.3 Specialised Cells, Day 1.<br>Function, specialised and adapted; the three specialised animal cells. | <p>► <a href="#">Slides · Science 1.3 Specialised Cells</a></p> <p>Starter: finish the four sentences (cell membranes..., a nucleus...).</p> <p>Key words: function, specialised, adapted.</p> <p>Red blood cell, neurone and ciliated cell — drawn diagrams paired with real micrographs; Questions 1 and 2.</p> | Key words copied and the three animal cells described.<br>Students notice that a red blood cell has no nucleus. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.3 Lowest Common Multiples, Day 1.<br>Multiple, common multiple, LCM;<br>“common” means shared.        | <p>► <a href="#">Slides · Maths 1.3 Lowest Common Multiples</a></p> <p>Starter: the multiples of 4 and of 6; the flashing-lights hook.</p> <p>“Common” means shared, not ordinary; common multiples lead to the lowest common multiple.</p> <p>Draw This: Mr Bowen's list method, the LCM of 6 and 9.</p>         | Three definitions and the LCM method copied.<br>Students find the LCM of two numbers by listing.                |

## Thursday 13 August

| Subject                             | Learning Objective / Focus                                                                             | Main Activities                                                                                                                                                                                                                                                             | Evidence of Learning                                                                                                                                                                 |
|-------------------------------------|--------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1.3, Day 2.<br>The two specialised plant cells; structure fits function; build the summary table. | Root hair cell (absorbs water; why it has no chloroplasts) and palisade cell (photosynthesis); real plant micrographs.<br>Drill the sentence frame: “adapted to _____ because it has _____.”<br>Draw This: the structure–function table; recall quiz across the five cells. | All five cells entered in the structure–function table.<br>Students use the “adapted because” frame in full sentences.<br>Homework: read pp. 17–21; finish the table; Questions 1–4. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.3, Day 2.<br>Consolidate LCM; the “don’t just multiply” trap; word problems.                    | LCM-finder drill; the trap that the LCM of 4 and 8 is 8, not 32.<br>Word problems: the two buses, the barbecue packs, the two taps, the two alarms.                                                                                                                         | Students know the LCM is usually smaller than the product.<br>Homework set: Exercise 1.3, pp. 12–13.                                                                                 |

## Friday 14 August

| Subject                             | Learning Objective / Focus                                                         | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Evidence of Learning                                                                                                                                                            |

## Week 3 · 17–21 August 2026

| Day                 | Science · 8:45 – 9:35                                                  | Mathematics · 10:45 – 11:35                              |
|---------------------|------------------------------------------------------------------------|----------------------------------------------------------|
| <b>Monday 17</b>    | Jeopardy review of Unit 1.1–1.3, before starting 1.4.                  | Unit 1.4 Highest Common Factors, Day 1.                  |
| <b>Tuesday 18</b>   | Unit 1.4 Cells, Tissues and Organs — the five-level ladder.            | Unit 1.4, Day 2 — the consecutive-numbers investigation. |
| <b>Wednesday 19</b> | Unit 1.4, Day 2 — the organ relay; completing the ladder.              | Unit 1.5 Tests for Divisibility, Day 1 — the nine tests. |
| <b>Thursday 20</b>  | <b>Lab:</b> safety and skills — estimating, weighing, and the scalpel. | Unit 1.5, Day 2 — the shuffle investigation.             |
| <b>Friday 21</b>    | Jeopardy review across Unit 1.1–1.4.                                   | Consolidating 1.5 — Workbook, then Around the World.     |

### ► Links for this week

► Slides · Science 1.4 Cells, Tissues and Organs

Teacher plan · Science 1.4

► Slides · Maths 1.4 Highest Common Factors

Teacher plan · Maths 1.4

► Slides · Maths 1.5 Tests for Divisibility

Teacher plan · Maths 1.5

► Slides · Jeopardy — Monday and Friday

Homework: [Packet 3 · Factors, Tests and Tissues](#) — due Monday 24 August.

Homework: [Extra sheet 3 · The Two That Do the Work](#) — goes out with Packet 3.

## Parent update · Friday 21 August

### THIS WEEK

#### Science — Unit 1.4: Tissues & Our First Lab

We wrapped up Unit 1 looking at how cells group into tissues, then ran our first lab of the year to test our lab safety and measuring skills. Students carefully measured out the most vital powder in science (coffee), then practised safely slicing the thinnest possible layers of onion epidermis. We closed out the week with a round of Review Jeopardy.

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U01\\_4](https://bowenpra.github.io/classroom/#/lesson/y7-science/U01_4)

#### Maths — Highest Common Factors & Tests for Divisibility

We worked through factors, finding Highest Common Factors, and practised quick shortcut rules to test if large numbers divide cleanly by 3, 4, 9, or 11.

► Slides · Maths 1.4 Highest Common Factors

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U01\\_4](https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_4)

► Slides · Maths 1.5 Tests for Divisibility

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U01\\_5](https://bowenpra.github.io/classroom/#/lesson/y7-math/U01_5)

These links open the same slides we used in class. Students can click through them at home to review.

### NEW: THE READING CHALLENGE

We're launching our reading challenge! Every completed book gets added to our classroom reading wall. Encourage your child to pick books they actually want to read — building the habit of finishing matters more than the title.

### NEXT WEEK

---

### Science

Unit 1 review, followed by a lab exploring the practical difference between accuracy and precision.

### Maths

Finishing Unit 1 with exponents, then moving directly into our whole-unit review.

### HOMEWORK

---

Homework Packet 3 covers our work with factors, divisibility tests, and cell tissues. Due **Monday** at the start of class.

[Packet 3 · Factors, Tests and Tissues](#)

[Extra sheet 3 · The Two That Do the Work](#)

If a student doesn't finish the packet, they may get an additional fundamentals packet for extra practice.

Thank you,  
Mr Bowen

# Monday 17 August

| <b>Science</b><br>8:45 – 9:35       | Unit 1.4, Day 2.<br>Consolidating tissues, organs, organ systems and organisms.                                               | Organ relay in groups of four: one organ each, out loud, in English, no repeats.<br>Workbook 1.4 – complete the five-level ladder; Question 3 run as a hunt through the notebook.<br>Recap the breathing and digestive systems, and the organs each shares.                                                                                                                                                                                                                                                                                                         | Organ relay: at least ten organs named correctly as a class.<br>Completed Workbook 1.4 pages.<br>Students can place one example correctly on all five rungs of the ladder.                                                                             |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.5 Tests for Divisibility, Day 1.<br>Test a number for divisibility by 2, 3, 4, 5, 6, 8, 9, 10 and 11 without dividing. | <a href="#">► Slides · Maths 1.5 Tests for Divisibility</a><br>Starter: which of 24, 35, 90, 91 divide by 2? By 5? – noticing they already know two tests.<br>Hook: 3960 against every number from 2 to 11 – guesses only, paid back one test at a time.<br>“6 is a factor of 24”, “24 is divisible by 6”, “24 is a multiple of 6” – one fact, three sentences.<br>The nine tests, copied one at a time, each checked against 3960.<br>Where is 7? – the number with no easy test, and why.<br>Factor Hunt widget: 1908, 2530, 7128, calling out which test to run. | All nine tests copied and correctly applied to 3960.<br>Students turn one division fact into all three sentences (factor of / divisible by / multiple of).<br>Students can explain why 7 has no test, rather than assuming their notes are incomplete. |

## Thursday 20 August

| Subject                             | Learning Objective / Focus                                                                                | Main Activities                                                                                                                                                                                                                                     | Evidence of Learning                                                                                                                                                                                                        |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | <b>Lab: safety and skills.</b><br>Practising measuring and cutting safely – two techniques used all year. | Measuring coffee grounds: eyeball and estimate 10 g first, then weigh accurately on a scale and compare.<br>Scalpel technique: cut the thinnest possible layer of onion epidermis, safe hand position, blade always cutting away from fingers.      | Estimated mass compared honestly against the measured mass, in a full sentence.<br>Onion epidermis cut thin enough to see through, using correct scalpel grip.<br>Every student can state the two safety rules from memory. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.5, Day 2.<br>Consolidating the nine divisibility tests.                                            | Rapid-fire test drill: a number on the board, hands up with the test that applies.<br>Workbook 1.4 & 1.5, independent practice.<br>The shuffle investigation: an arrangement of 8, 3, 6, 1 that fails divisibility by 9 – there isn't one, and why. | Students say the test out loud, not just the answer – “the digits add to 18, so it divides by 9.”<br>Completed Workbook 1.4 & 1.5 pages.                                                                                    |

## Friday 21 August

| Subject                             | Learning Objective / Focus                                | Main Activities                                                                                                                                                                                                         | Evidence of Learning                                                                                                                                 |
|-------------------------------------|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Consolidating Unit 1 (1.1–1.4) – recall at speed.         | <p>► <a href="#">Slides · Jeopardy – Science 1.1–1.3, with 1.4 recap questions added</a></p> <p>Teams of 3–4; Mr Bowen hosts; a wagered final question.<br/>Close by recapping the two ideas that caught teams out.</p> | <p>Teams show correct answers across cells, specialised cells, and tissues/organs.</p> <p>The class can state the five-level ladder from memory.</p> |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating tests for divisibility.<br>Recall at speed. | <p>Workbook 1.5 – pages taken from the class folders, worked independently.</p> <p>“Around the World” with divisibility questions if time allows.</p>                                                                   | <p>Completed Workbook 1.5 pages.</p> <p>Correct answers at speed in Around the World.</p>                                                            |

## Week 4 · 24–28 August 2026

| Day                 | Science · 8:45 – 9:35                                          | Mathematics · 10:45 – 11:35                                  |
|---------------------|----------------------------------------------------------------|--------------------------------------------------------------|
| <b>Monday 24</b>    | Unit 1 test prep – building the class list of sticking points. | Unit 1.6 Square Roots & Cube Roots, Day 1.                   |
| <b>Tuesday 25</b>   | <b>End-of-Unit 1 Test</b> (1.1–1.4).                           | Unit 1.6, Day 2 – trapping a root between two whole numbers. |
| <b>Wednesday 26</b> | Independent review practice; the five key words on a poster.   | Consolidating 1.6 – Workbook, then recall at speed.          |
| <b>Thursday 27</b>  | <b>Lab:</b> accuracy vs precision.                             | <b>End-of-Unit 1 Test</b> (1.1–1.6).                         |
| <b>Friday 28</b>    | Plant a seedling; build the classroom planter.                 | Around the World across the whole of Unit 1.                 |

### ► Links for this week

- Slides · Science: Accuracy and Precision Lab
- Slides · Maths 1.5 Tests for Divisibility
- Slides · Maths 1.6 Square Roots & Cube Roots

Teacher plan · Maths 1.6

Homework: [Packet 4 · Divisibility and Roots](#) – due Thursday 3 September, at the start of class.

## Parent update · Friday 28 August

### THIS WEEK

#### Science – Unit 1 Review & Accuracy Precision Lab

We finished Unit 1 with a short Cambridge assessment covering cells, tissue, and specializations! Additionally, students did three stations during lab time to test their ability to measure with both accuracy and precision. Then on Friday, we made our hanging classroom garden.

- Slides · Science: Accuracy and Precision Lab  
[https://bowenpra.github.io/classroom/#/lesson/y7-science/U00\\_2](https://bowenpra.github.io/classroom/#/lesson/y7-science/U00_2)

#### Mathematics – Unit 1 Review & Cubes and Squares

We explored squares, cubes, and roots. Then we ended the week with a Cambridge assessment.

These links open the same slides we used in class. Students can click through them at home to review.

### THE READING CHALLENGE UPDATE

Every student in the class has finished at least one book since our challenge started last week. We are quickly decorating our wall with all the books finished!

### HOMEWORK PACKET 4

Due **Thursday**, at the start of class. Please note: any student who does not complete the packet may receive an additional fundamentals packet for extra practice. This week's packet is shorter due to the class participation in the reading challenge.

[Packet 4 · Divisibility and Roots](#)

---

**NEXT WEEK (NO SCHOOL MONDAY, TUESDAY, & WEDNESDAY)**

---

We have three days holiday this week. Due to the extended time off, I have made online work for the students to do, reviewing the first mathematics unit. This is entirely optional as some students have asked for extra review. Every student has already signed in to this online portal, but please reach out if you need help.

Mr Bowen

# Monday 24 August

| Subject                             | Learning Objective / Focus                                                                                                           | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Evidence of Learning                                                                                                                                                                           |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1 test prep – getting ready for tomorrow's test.                                                                                | Students revisit notebooks and workbook pages from 1.1–1.4.<br>Build a class list of the five key words that come up most (cell, organelle, tissue, organ, organism) and one sticking point each.<br>Pairs quiz each other from their own notes.                                                                                                                                                                                                                                                                                                                        | A class-generated list of sticking points to target on Tuesday.<br>Students can define at least three of the five key words unprompted.                                                        |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.6 Square Roots & Cube Roots, Day 1.<br>Square and cube a number, and find a square root and cube root from two learned lists. | <p>► <a href="#">Slides</a> · <a href="#">Maths 1.6 Square Roots &amp; Cube Roots</a></p> <p>Starter: <math>7 \times 7</math> and <math>2 \times 2 \times 2</math> on whiteboards.</p> <p>Hook: 225 paving stones in a perfect square – how many along one side? Guesses only.</p> <p>Draw This: the twelve square numbers and the six cube numbers, copied in full.</p> <p>Squaring and rooting as “there and back”; <math>5^2</math> against <math>5 \times 2</math>, the trap that costs marks.</p> <p>Worked example widget: the book's own Worked Example 1.6.</p> | Twelve squares and six cubes copied correctly.<br>Students can find a square or cube root from the list without a calculator.<br>$5^2$ read correctly as “five squared”, not “five times two.” |

## Tuesday 25 August

| Subject                             | Learning Objective / Focus                                                          | Main Activities                                                                                                                                                                                                               | Evidence of Learning                                                                                         |
|-------------------------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | <b>End-of-Unit 1 Test</b> – cells, specialised cells, tissues and organs (1.1–1.4). | Papers face down, silence.<br>Hands up to have a word READ aloud – never explained.<br>Students who finish early check their answers over, then read quietly.<br>Marked and returned before Unit 2 begins.                    | Completed end-of-unit test for every student.<br>Marks recorded against 1.1–1.4; gaps flagged before Unit 2. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1.6, Day 2.<br>Consolidating squares, cubes and roots.                         | Team game: name the square or cube root against a timer.<br>Workbook 1.6, independent practice – trapping a non-whole root between two consecutive whole numbers.<br>Recap “consecutive” and why it matters for Exercise 1.6. | Roots trapped correctly between two consecutive whole numbers.<br>Homework set: Exercise 1.6, pp. 17–19.     |

## Wednesday 26 August

| Subject                             | Learning Objective / Focus                                | Main Activities                                                                                                                                                                             | Evidence of Learning                                                                           |
|-------------------------------------|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Consolidating Unit 1 through independent review practice. | Workbook Unit 1 review pages, worked independently, circulating and supporting.<br>Students who finish early write one full-sentence definition for each of the five key words on a poster. | Completed Unit 1 review workbook pages.<br>Five correct, full-sentence definitions per poster. |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating Unit 1.6.<br>Recall at speed.               | Workbook 1.6 – pages taken from the class folders, worked independently.<br>Rapid-fire recall: squares and cubes against a 2-minute timer.                                                  | Completed Workbook 1.6 pages.<br>Correct answers at speed in the recall drill.                 |

## Thursday 27 August

| Subject                             | Learning Objective / Focus                                                                                  | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                         | Evidence of Learning                                                                                                                              |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | <b>Lab: accuracy vs precision.</b>                                                                          | Define accuracy (how close to the true value) and precision (how close repeated measurements are to each other), with a target diagram.<br><br>Skills stations: repeat measurements and plot results as accurate/precise, accurate/imprecise, inaccurate/precise, inaccurate/imprecise.<br><br>Each group writes one full sentence explaining which of their own measurements were accurate, precise, both, or neither. | Correct classification of results against the target diagram.<br><br>One full, correct sentence per group distinguishing accuracy from precision. |
| <b>Mathematics</b><br>10:45 – 11:35 | <b>End-of-Unit 1 Test</b> — integers, factors and multiples, divisibility, square and cube roots (1.1–1.6). | Calculators not allowed.<br>Papers face down, silence.<br>Hands up to have a word READ aloud — never explained.<br>Marked and returned before Unit 2 begins.                                                                                                                                                                                                                                                            | Completed end-of-unit test for every student.<br>Marks recorded against 1.1–1.6; gaps flagged before Unit 2.                                      |

## Friday 28 August

| Subject                             | Learning Objective / Focus                                                                                                   | Main Activities                                                                                                                                                                                                                                                                                                                                         | Evidence of Learning                                                                                                                                               |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Plant a seedling; build a classroom planter.<br>Apply what we know about roots and root hair cells; care for a living thing. | Recap: roots and root hair cells absorb water from the soil (links to 1.3).<br>Each student plants a seedling in soil in their own pot.<br>Build a shared classroom planter; label every pot with a name and today's date.<br>Agree a watering rota and write it on the board.<br>Each student writes one full sentence: what a seedling needs to grow. | Every student has a planted, labelled seedling.<br>A watering rota is agreed and displayed.<br>Each student writes what a plant needs, in a full English sentence. |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating Unit 1 (1.1–1.6).<br>Recall at speed.                                                                          | “Around the World” with questions spanning all of Unit 1 — integers, multiples, factors, divisibility, roots.<br>Mr Bowen hosts; correct and fast beats correct and slow.                                                                                                                                                                               | Correct answers at speed in Around the World, across the full range of Unit 1 topics.                                                                              |

## Week 5 · 31 August–4 September 2026

| Day                   | Science · 8:45 – 9:35                                                      | Mathematics · 10:45 – 11:35                                                    |
|-----------------------|----------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| <b>Mon 31 – Wed 2</b> | No school – National Day holiday. Optional Unit 1 review on the Dashboard. |                                                                                |
| <b>Thursday 3</b>     | Unit 1 review – the five key words, and the questions the test caught.     | Unit 1 drills – integers, factors and multiples, roots, at speed. Packet 4 in. |
| <b>Friday 4</b>       | Mid-Autumn Festival prep – booth ideas and crafts for Friday 25 September. | Squish toys from nets of 3D shapes; Unit 1 drills to finish. Packet 5 out.     |

### ► Links for this week

► Slides · [Science 1.4 Cells, Tissues and Organs](#) (review)

► Slides · [Maths 1.6 Square Roots & Cube Roots](#) (review)

[Dashboard](#) · optional Unit 1 review online

Homework: [Packet 5 · Unit 1, All of It](#) – out Friday 4 September, due Thursday 10 September.

Homework: [Extra sheet 5 · Bring Down the Next Digit](#) – goes out with Packet 5.

## Parent update · Friday 4 September

### Two things to fix next time

The sent post does not say which period the Mid-Autumn project time used; the day page puts the booth planning in Science and the nets in Mathematics, which is a guess. The post also linked the packet by its direct PDF address (`assets/hw05-...pdf`), which changes on every deploy – the shelf link below is the one that lasts.

### Science – Unit 1 Review

A short week back from the holiday, so we used the extra time for more Unit 1 review.

### Mathematics – Unit 1 Drills

We did more Unit 1 math drills to keep skills sharp after the break.

### MID-AUTUMN FESTIVAL PREP BEGINS

We started project time for our upcoming Mid-Autumn Festival on Friday the 25th! Students discussed business ideas and crafts for their booths, and some made squish toys using net diagrams of 3D shapes.

### HOMEWORK

Due Thursday at the start of class.

[Packet 5 · Unit 1, All of It](#)

### NEXT WEEK

We start Unit 2 in both Math and Science! We'll also have lab next Thursday.

Thank you,  
Mr Bowen

## Thursday 3 September

| Subject                             | Learning Objective / Focus                                                                          | Main Activities                                                                                                                                                                                                                                                      | Evidence of Learning                                                                                               |
|-------------------------------------|-----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 1 review after the holiday.<br>Recall the five key words and the ideas the Unit 1 test caught. | Starter: define cell, organelle, tissue, organ, organism from memory, then check against the notebook.<br>Go over the test questions the class lost most marks on; reteach on the board.<br>Pairs quiz each other from Workbook 1.1–1.4; Around the World to finish. | Five key words defined correctly, unprompted.<br>The two weakest test questions answered correctly on whiteboards. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 1 drills after the holiday.<br>Recall at speed across 1.1–1.6.                                 | Packet 4 collected at the start of class.<br>Rapid-fire rounds on whiteboards: integer sums and products, LCM and HCF by listing, divisibility tests, squares and cubes.<br>Reteach any round where more than a third of boards are wrong.                           | Packet 4 in from every student; missing packets noted.<br>Correct answers at speed in every round.                 |

## Friday 4 September

| Subject                             | Learning Objective / Focus                                                                   | Main Activities                                                                                                                                                                                                                                | Evidence of Learning                                                                                     |
|-------------------------------------|----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Mid-Autumn Festival prep, session 1.<br>Plan a booth: a product or craft, and who does what. | Explain the festival day (Friday 25 September) and what a booth needs.<br>Groups brainstorm business ideas and crafts; one idea agreed per group.<br>Each group lists materials, jobs and a price in full English sentences.                   | One booth plan per group with a product, a materials list and named jobs.                                |
| <b>Mathematics</b><br>10:45 – 11:35 | Nets of 3D shapes, applied.<br>Finish the Unit 1 drills; set Packet 5.                       | Squish toys: cut, fold and stuff a net of a cube or cuboid; name the faces, edges and vertices while building.<br>Remaining Unit 1 drill rounds for anyone not building.<br>Packet 5 and Extra sheet 5 handed out — due Thursday 10 September. | A finished squish toy from a correct net.<br>Every student has Packet 5 with the due date written on it. |

## Week 6 · 7–11 September 2026

| Day                | Science · 8:45 – 9:35                                                                           | Mathematics · 10:45 – 11:35                                                    |
|--------------------|-------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| <b>Monday 7</b>    | Unit 2.1a Solids, Liquids and Gases — properties, the two syringes, the Word Wall.              | Unit 2.1 Constructing Expressions — a letter for a number you cannot count.    |
| <b>Tuesday 8</b>   | Unit 2.1b Particle Theory — three arrangements; you are the particles.                          | Unit 2.1, Day 2 — the four phrases; Workbook 2.1.                              |
| <b>Wednesday 9</b> | Unit 2.2a Changes of State — the five changes, verb and noun; the particle model.               | Unit 2.2 Using Expressions and Formulae — substituting; the hidden times sign. |
| <b>Thursday 10</b> | Unit 2.2b Measuring, and Heating Water — meniscus, thermometer, the heating curve. Packet 5 in. | Unit 2.2, Day 2 — formulae with two letters; Workbook 2.2. Packet 6 out.       |
| <b>Friday 11</b>   | Task: The Formula Machine, Part 1 — temperature scales and the distance to a storm.             | Task: The Formula Machine, Part 2 (the pour), then Girl Math.                  |

Homework: [Packet 6 · Letters and Particles](#) — out Thursday 10 September, due Monday 14 September.

Homework: [Extra sheet 6 · One Letter at a Time](#) — goes out with Packet 6.

## Parent update · Friday 11 September

### Friday's two periods

Friday is recorded as the Formula Machine in Science (its formulae are the thermometer and the storm) and the pour plus Girl Math in Mathematics. If the split was different, change the two Friday rows; the post below does not depend on it.

## SCIENCE – UNIT 2: SOLIDS, LIQUIDS AND GASES

We started Unit 2 this week. Students learned the properties of solids, liquids and gases, and the particle theory that explains them: everything is made of tiny particles, and how they are arranged decides whether something keeps its shape, pours, or can be squashed. Then we moved on to changes of state (melting, freezing, evaporating, boiling and condensing) and practised measuring volume and temperature the way a scientist does.

► Slides · Science 2.1a Solids, Liquids and Gases

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U02\\_1a](https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_1a)

► Slides · Science 2.1b Particle Theory

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U02\\_1b](https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_1b)

► Slides · Science 2.2a Changes of State

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U02\\_2a](https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_2a)

► Slides · Science 2.2b Measuring, and Heating Water

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U02\\_2b](https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_2b)

New this week: an interactive particle model. Heat or cool ice, mercury, oxygen or iron and watch the particles change state. Students can try it at home.

► Slides · Heating & Cooling: A Particle Model

[https://bowenpra.github.io/classroom/#/lesson/y7-science/U02\\_model\\_states](https://bowenpra.github.io/classroom/#/lesson/y7-science/U02_model_states)

## MATHS – UNIT 2: EXPRESSIONS AND FORMULAE

We started algebra. Students learned to use a letter for a number we don't know yet, to write expressions like  $c - 50$  and  $3n$ , and to substitute a number into an expression or a formula. The hardest part is the English: "3 less than  $t$ " is  $t - 3$ , not  $3 - t$ .

► Slides · Maths 2.1 Constructing Expressions

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U02\\_1](https://bowenpra.github.io/classroom/#/lesson/y7-math/U02_1)

► Slides · Maths 2.2 Using Expressions and Formulae

[https://bowenpra.github.io/classroom/#/lesson/y7-math/U02\\_2](https://bowenpra.github.io/classroom/#/lesson/y7-math/U02_2)

On Friday we did two tasks. The Formula Machine: running real formulas, such as converting Celsius to Fahrenheit, finding the distance to a storm from the gap between the flash and the thunder, and working out the depth of water in a tank. Girl Math: shar-

ing pieces of rice paper by rules like "twice as many as" and "3 more than", solved with algebra against the clock.

► Slides · Task: The Formula Machine

[https://bowenpra.github.io/classroom/#/lesson/y7-math/T01\\_formula-machine](https://bowenpra.github.io/classroom/#/lesson/y7-math/T01_formula-machine)

► Slides · Task: Girl Math

[https://bowenpra.github.io/classroom/#/lesson/y7-math/T02\\_girl-math](https://bowenpra.github.io/classroom/#/lesson/y7-math/T02_girl-math)

## ONLINE DASHBOARD (OPTIONAL)

The online Dashboard is now updated through Maths 2.2 and Science 2.2. This is optional, but if your child gets stuck on the homework, Science 2.1 and 2.2 on the Dashboard are the best place to look first.

<https://bowenpra.github.io/Dashboard/>

Login: student name

Code: last 3 digits of the student email

## HOMEWORK – PACKET 6

Due **Monday 14 September** at the start of class. It covers this week's Maths and Science. The last page is a challenge that joins the two subjects together (volume). It is okay if students cannot finish that page – they should try it and show their working.

[Packet 6 · Letters and Particles](#)

## NEXT WEEK

### Science

Unit 2 continues: using the particle model to explain what happens during a change of state.

### Maths

Unit 2 continues: collecting like terms and simplifying expressions.

Thank you,  
Mr Bowen

# Monday 7 September

| Subject                             | Learning Objective / Focus                                                                                                                                                | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Evidence of Learning                                                                                                                                                                |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.1a Solids, Liquids and Gases.<br>Sort a substance by what it does, not how it looks; list the properties of each state; use hypothesis and theory correctly.       | <p>► <a href="#">Slides · Science 2.1a Solids, Liquids and Gases</a></p> <p>Starter: two solids, two liquids, two gases in the notebook.</p> <p>Hook: is sand a liquid? Guesses only; answered after the properties.</p> <p>Copy matter, states of matter, property; one state at a time with a copy-down panel each.</p> <p>The two syringes – predict which plunger moves, then push.</p> <p>Draw This: the four-question table, ruled; Questions 1–7.</p> <p>Page 30: hypothesis, theory, particle; the kitchen-smell question left open for tomorrow.</p> <p>Word Wall (solid / liquid / gas puzzle) if time allows.</p>               | Table ruled and ticked correctly for all three states.<br>Students say sand is a solid that pours, and why only a gas compresses.<br>Hypothesis and theory defined in the notebook. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.1 Constructing Expressions.<br>Use a letter for a number you cannot count; leave $c - 50$ unfinished; write $3s$ ; read “less than” and “subtract from” correctly. | <p>► <a href="#">Slides · Maths 2.1 Constructing Expressions</a></p> <p>Starter: how many particles in one drop of water? (science bridge – nobody can write the number, and that is the point).</p> <p>Name it: let <math>n</math> represent the number; first copy-down panel.</p> <p>The wall: the coffee table where the third row cannot finish – <math>c - 50</math> is the answer.</p> <p>Notation: <math>3 \times s</math> is written <math>3s</math>.</p> <p>The four phrases: more than, less than, times, subtract from; the order flips for “h less than t”.</p> <p>“Subtract the result from 25” is <math>25 - 3n</math>.</p> | Eight copy-down panels in the notebook.<br>“h less than t” written $t - h$ on whiteboards.<br>$c - 50$ accepted as a finished answer.                                               |

## Tuesday 8 September

| Subject                             | Learning Objective / Focus                                                                                                             | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Evidence of Learning                                                                                                                   |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.1b Particle Theory.<br>Describe the particle arrangement in each state and use it to explain pouring, compressing and a vacuum. | <p>► <a href="#">Slides · Science 2.1b Particle Theory</a></p> <p>Starter: three things a gas can do that a solid cannot, books closed.<br/>           Yesterday's kitchen-smell question, then the ink in water.<br/>           Copy the theory: all matter is made of particles, arranged differently.<br/>           Three arrangements, one copy-down panel each; everyone stands and becomes the particles.<br/>           Page 33: why water pours and a brick does not; vacuum.<br/>           The sponge: a solid you can squash — where the air goes.<br/>           Draw This: the three-box activity; recap and homework.</p> | Three particle diagrams drawn correctly with properties beside them.<br>Students explain the sponge without saying a solid compresses. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.1, Day 2.<br>Consolidate constructing expressions; the four phrases at speed.                                                   | <p>Team game: an English phrase on the board, the expression on whiteboards, against a timer.<br/>           Workbook 2.1 — independent practice, circulating.<br/>           Recap “less than” and “subtract from” before independent work.</p>                                                                                                                                                                                                                                                                                                                                                                                         | Expressions written correctly for all four phrase types.<br>Completed Workbook 2.1 pages.                                              |

## Wednesday 9 September

| Subject                             | Learning Objective / Focus                                                                                                                                             | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Evidence of Learning                                                                                                                                                                      |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.2a Changes of State.<br>Name the five changes as journeys from one state to another; verb and noun for each; melting and boiling points of water.               | <p>► <a href="#">Slides · Science 2.2a Changes of State</a></p> <p>Starter: draw the three particle pictures from memory.</p> <p>Hook: an ice cube becomes a puddle, the puddle disappears — where did the water go, twice?</p> <p>The from-to frame; the five changes one at a time, with the particle model widget showing each one as it happens.</p> <p>The verb / noun pairs (melt / melting); Draw This.</p> <p>Activity 2.2.1 in pairs with the change cards.</p>                                                                                                                                      | Five changes named as from-to sentences with the right verb and noun.<br>0 and 100 degrees given as water's melting and boiling points.<br>Students distinguish evaporating from boiling. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.2 Using Expressions and Formulae.<br>Substitute a number for a letter; $3n$ with $n = 4$ is 12, never 34; keep the order of operations; know what a formula is. | <p>► <a href="#">Slides · Maths 2.2 Using Expressions and Formulae</a></p> <p>Starter: the cup from 2.1, now <math>c = 320</math> — the row finishes.</p> <p>Substitute and value; the football substitution.</p> <p>The wall: the hidden times sign — <math>3n</math> is <math>3 \times n</math>.</p> <p><math>3x + 2</math> with <math>x = 4</math>: 14 or 18? Show of hands, then the reason.</p> <p>Formula: an expression has no equals sign, a formula does; <math>A = lw</math>.</p> <p>The minus sign travels with its number — use brackets.</p> <p>The taxi formula: build one, then break one.</p> | Seven copy-down panels in the notebook.<br>$3n$ with $n = 4$ gives 12 on every whiteboard.<br>Students say when a formula stops being true.                                               |

## Thursday 10 September

| Subject                             | Learning Objective / Focus                                                                                                                                                           | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Evidence of Learning                                                                                                                                                                                                   |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.2b Measuring, and Heating Water.<br>Read a measuring cylinder and a thermometer correctly; plan and run the heating-water investigation; plot and describe the heating curve. | Packet 5 collected at the start of class.<br>➤ <a href="#">Slides · Science 2.2b Measuring, and Heating Water</a><br>Starter: guess three temperatures in degrees C.<br>Hook: two students read the same cylinder as 50 and 47 — who is right?<br>The meniscus: read the bottom at eye level; the thermometer: read the top at eye level. Copy both.<br>Predict, then safety; Draw This: the apparatus, bulb in the water.<br>The investigation, reading every minute; plot temperature against time; the particle model at the boiling point. | Packet 5 in from every student; missing packets noted.<br>Cylinder and thermometer read correctly on the two check questions.<br>A plotted heating curve, and the sentence: it rises, then stays at the boiling point. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.2, Day 2.<br>Consolidate substituting; formulae with two letters; set Packet 6.                                                                                               | Team game: substitute against the timer — $3n$ , $3n + 2$ , $25 - 3n$ .<br>Workbook 2.2 — independent practice, circulating.<br>Recap the hidden times sign and the travelling minus before independent work.<br>Packet 6 and Extra sheet 6 handed out — due Monday 14 September; say that Section C is a challenge.                                                                                                                                                                                                                           | Completed Workbook 2.2 pages.<br>Every student has Packet 6 with the due date written on it.                                                                                                                           |

## Friday 11 September

| Subject                             | Learning Objective / Focus                                                                                                                                                              | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Evidence of Learning                                                                                                                                                                 |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Task: The Formula Machine, Part 1 – formulae from Science.<br><br>Run a formula in three lines: write it, put the numbers in, work it out.                                              | <p>► <a href="#">Slides</a> · Task: <a href="#">The Formula Machine</a></p> <p>Starter: the ant walks round the rectangle – 22.</p> <p>The three-line routine, copied; the middle line is where the marks are.</p> <p>Station 1, perimeter; Station 2, area of a triangle – the height is the dashed line.</p> <p>The argument: 35 degrees C and 95 degrees F are the same temperature – link to Thursday's thermometer.</p> <p>Station 4, the storm: flash first, then the bang; <math>d = t</math> divided by 3.</p> | Every problem worked in three lines, not one.<br><br>Station 3: 35 degrees C converted to 95 degrees F, with the working.<br><br>Students say why the flash arrives before the bang. |
| <b>Mathematics</b><br>10:45 – 11:35 | Task: The Formula Machine, Part 2, then Task: Girl Math.<br><br>Find the letter that was not given by counting cubes; write “twice as many” and “3 more than” as expressions and solve. | <p>The pour: water from one tank into another with a different base – deeper, shallower or the same? Real water first, then the widget.</p> <p>► <a href="#">Slides</a> · Task: <a href="#">Girl Math</a></p> <p>Twice as many is <math>2n</math>; 3 more than is <math>n + 3</math>; the four steps.</p> <p>The game: teams, ten rounds, read each round aloud in English before the clock runs.</p> <p>Exit question: 34 pieces, Su three times Ana, Tess 4 more than Ana.</p>                                       | Depth found by counting cubes, not by rearranging.<br><br>Every share written as an expression before the total is used.<br><br>Exit question solved by at least half the class.     |

## Week 7 · 14–18 September 2026

| Day                 | Science · 8:45 – 9:35                                                                        | Mathematics · 10:45 – 11:35                                                           |
|---------------------|----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| <b>Monday 14</b>    | Unit 2.3 Explaining Changes of State – why each change happens, with particles. Packet 6 in. | Workbook day – Units 2.1 and 2.2.                                                     |
| <b>Tuesday 15</b>   | Unit 2.5 Atoms, Elements and the Periodic Table – cut gold in half 25 times; symbols.        | Unit 2.3 Collecting Like Terms – 7 apples and 3 bananas; $x$ means $1x$ .             |
| <b>Wednesday 16</b> | Unit 2.6 Compounds and Formulae – would you eat sodium and chlorine?                         | Unit 2.4 Expanding Brackets – the grid; multiply every term.                          |
| <b>Thursday 17</b>  | Unit 2.7 Compounds and Mixtures – iron and sulfur, stirred, then heated.                     | Unit 2.5 Constructing and Solving Equations – undo the last step first. Packet 7 out. |
| <b>Friday 18</b>    | Jeopardy – the Science Unit 2 board, 2.1–2.3 and 2.5–2.7.                                    | Workbook day – Units 2.3 to 2.5.                                                      |

## Monday 14 September

| Subject                             | Learning Objective / Focus                                                                                                                                                                                                     | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Evidence of Learning                                                                                                                                                            |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.3 Explaining Changes of State.<br>Explain why each change of state happens with particle theory: heat energy is transferred to or from the particles, and the attractive forces between them are overcome or take hold. | Packet 6 collected at the start of class.<br>➤ <a href="#">Slides · Science 2.3 Explaining Changes of State</a><br>Starter: the five changes of state from memory.<br>Bridge: 2.2 said what happens; today says why. Copy heat energy, transferred, attractive force, expand.<br>The bridge photo: why engineers leave gaps.<br>Draw This: heating to melting, with rulers; copy the melting explanation.<br>Boiling, then condensing and freezing, teacher-led; the Particle Explainer steps through all five changes.<br>Book questions 1–3; exit question on the bridge. | Packet 6 in from every student; missing packets noted.<br>Melting explained in the notebook with the four key words.<br>Exit question: the bridge is longer in summer, and why. |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating Units 2.1 and 2.2 independently.                                                                                                                                                                                 | Workbook 2.1 & 2.2 – continue and complete, circulating and supporting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Completed Workbook 2.1 & 2.2 pages.                                                                                                                                             |

## Tuesday 15 September

| Subject                             | Learning Objective / Focus                                                                                                                                                                                     | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Evidence of Learning                                                                                                                                                                                        |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.5 Atoms, Elements and the Periodic Table.<br><br>Say what an atom and an element are; find periods, groups, metals and non-metals in the first 20 elements; write symbols with the capital-letter rule. | <p>► <a href="#">Slides · Science 2.5 Atoms, Elements and the Periodic Table</a></p> <p>Starter: draw the particles in a solid; what makes it melt?</p> <p>Can you cut forever? Vote, then Democritus; copy ATOM. The halving counter: 25 cuts from a 1 cm cube to one gold atom.</p> <p>Real gold atoms and a nanotube; copy NANOTUBE and ELEMENT.</p> <p>Draw This: how atoms join — neon, gold, oxygen, sulfur.</p> <p>The Periodic Table: rows and columns, lightest to heaviest, metals and non-metals; copy PERIOD and GROUP.</p> <p>Symbols: why sodium is Na; Co or CO? Symbol Snap from the front.</p> <p>Questions 1–8, started in class and finished at home.</p>                                                  | <p>Eight key words and the joining drawing in the notebook.</p> <p>Symbols written as a capital then a small letter in Symbol Snap.</p> <p>Exit question: C, Ca and Cl told apart by the second letter.</p> |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.3 Collecting Like Terms.<br><br>Simplify by collecting like terms; x means 1x, so $8s - s = 7s$ ; leave $3a + 2b$ alone; move each sign with its term.                                                  | <p>► <a href="#">Slides · Maths 2.3 Collecting Like Terms</a></p> <p>Starter: <math>3a + 4a</math> and <math>7a</math> when <math>a = 5</math> — both are 35.</p> <p>The bag: say “7 apples and 3 bananas” before any letter; then <math>3a + 2b + 4a + b = 7a + 3b</math>.</p> <p>Copy TERM, LIKE TERMS, SIMPLIFY; like, collect and simplify in everyday English and in maths.</p> <p>Find, move, collect — the widget, four expressions.</p> <p>Vote: is <math>8s - s</math> equal to 8 or <math>7s</math>? Left hand A, right hand B. Copy x MEANS 1x.</p> <p>Like or Not? game; a second vote on the moving sign; copy KEEP THE SIGN.</p> <p>Bricks and pyramids; Mr Bowen’s homework, four mistakes; word problems.</p> | <p>Seven copy-down panels in the notebook.</p> <p><math>8s - s = 7s</math> on every whiteboard.</p> <p>Exit question: <math>5m - m + 2n + 4n = 4m + 6n</math>.</p>                                          |

## Wednesday 16 September

| Subject                             | Learning Objective / Focus                                                                                                                                       | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Evidence of Learning                                                                                                                                                        |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.6 Compounds and Formulae.<br>Tell an element from a compound; name compounds with -ide, -ate, mono and di; read a formula for which atoms, and how many.  | <p>► <a href="#">Slides · Science 2.6 Compounds and Formulae</a></p> <p>Starter: pairs test each other on element symbols.</p> <p>Sodium bursts into flame; chlorine is poisonous. Would you eat them bonded together? Vote — yes, it is salt.</p> <p>Copy COMPOUND, BONDING, SODIUM CHLORIDE and NEW PROPERTIES.</p> <p>Naming: the -ide and -ate rules; Name the Compound; Ha Long Bay's limestone for Questions 7–9.</p> <p>Vote: is <math>O_2</math> a compound? Copy MONO and DI. Draw This: <math>CO_2</math>, <math>H_2O</math>, <math>O_2</math>, <math>CH_4</math>.</p> <p>Copy FORMULA; Read the Formula; Element or Compound? game.</p> <p>Questions 10–17 started; homework: Activity 2.6.1, paper models.</p> | Eight written panels and the four-particle drawing.<br>$O_2$ called an element, with the reason: one kind of atom.<br>Exit question: $CaCO_3$ — three elements, five atoms. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.4 Expanding Brackets.<br>Use the grid to multiply every term inside the brackets; take the sign with its term; stop at $12 - 4c$ ; expand, then simplify. | <p>► <a href="#">Slides · Maths 2.4 Expanding Brackets</a></p> <p>Starter: <math>4 \times 16</math> in your head — nobody multiplies by 16, they split it.</p> <p>The grid, and a bar of chocolate snapped in two.</p> <p>The English: expand, multiply out, each. Copy BRACKETS.</p> <p>Vote: is <math>5(a + 3)</math> equal to <math>5a + 3</math> or <math>5a + 15</math>? The Expand widget; copy EXPAND.</p> <p>A minus inside. Vote: is <math>12 - 4c</math> equal to <math>8c</math>? Copy ALREADY FINISHED.</p> <p>Right or Wrong? game; Mr Bowen's homework; expand and simplify.</p>                                                                                                                             | Six copy-down panels in the notebook.<br>$5(a + 3) = 5a + 15$ on every whiteboard.<br>Exit question: $5(x + 2) + 3x = 8x + 10$ .                                            |

## Thursday 17 September

| Subject                             | Learning Objective / Focus                                                                                                                                                     | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Evidence of Learning                                                                                                                                  |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.7 Compounds and Mixtures.<br>Tell a compound from a mixture, using iron and sulfur stirred and then heated; say that air and tap water are mixtures.                    | <p>► <a href="#">Slides · Science 2.7 Compounds and Mixtures</a></p> <p>Starter: sort nine substances into elements and compounds.</p> <p>Stirred: can a magnet pull the iron out? Vote — yes. Copy FILINGS and MIXTURE.</p> <p>Heated: vote again; the video of the reaction; no — iron sulfide, a compound.</p> <p>Draw This: mixture and compound in two colours; copy both panels.</p> <p>Air: copy COMPOSITION and NATURAL EMISSIONS.</p> <p>Water: copy PURE and MINERAL. Vote: is tap water pure? The white solid left in a kettle.</p> <p>Mixture or Compound? game.</p>                                                                                                                                                                                           | Ten written panels and the Draw This.<br>Students say why the magnet fails after heating.<br>Exit question: salt water is a mixture, and why.         |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.5 Constructing and Solving Equations.<br>Solve one- and two-step equations with inverse operations; check by substituting; turn “I think of a number” into an equation. | <p>► <a href="#">Slides · Maths 2.5 Constructing and Solving Equations</a></p> <p>Starter: three missing-number boxes — the box is just a letter.</p> <p>Copy EQUATION and SOLVE beside expression and formula; reverse, inverse and “think of” in English.</p> <p>Vote: <math>x - 4 = 6</math>, so is <math>x = 2</math> or <math>10</math>? Put it back in; copy CHECK.</p> <p>Inverse operations; reverse the book’s flow chart with Undo It; Check It! game.</p> <p>I think of a number: <math>n - 5 = 21</math>, phrase by phrase.</p> <p>Socks and shoes: last on, first off. Vote: <math>2a + 4 = 18</math>, so is <math>a = 5</math> or <math>7</math>? Copy UNDO THE LAST STEP FIRST.</p> <p>Packet 7 and Extra sheet 7 handed out — due Monday 21 September.</p> | Seven copy-down panels in the notebook.<br>Every answer checked by putting it back in.<br>Every student has Packet 7 with the due date written on it. |

## Friday 18 September

| Subject                             | Learning Objective / Focus                                                                        | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Evidence of Learning                                                                                              |
|-------------------------------------|---------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Jeopardy review game.<br>Review Unit 2 so far (2.1–2.3 and 2.5–2.7; 2.4 not yet taught) in teams. | <p>► <a href="#">Slides · Jeopardy – Science Unit 2 board</a></p> <p>Categories: States of Matter, Particles, Changes of State, Elements &amp; Symbols, Compounds &amp; Formulae, Compound or Mixture?</p> <p>A picture on 29 of the 30 clues, most of them photographs from the lessons.</p> <p>The traps: the liquid box that looks full; the water on the outside of a cold glass; Cl, not CL; Co and CO.</p> <p>Mr Bowen hosts; close by recapping the ideas that caught teams out.</p> | Teams argue their answers in English.<br>The class can say why two dangerous elements make something you can eat. |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating Units 2.3 to 2.5 independently.                                                     | Workbook 2.3, 2.4 & 2.5 – continue and complete, circulating and supporting.                                                                                                                                                                                                                                                                                                                                                                                                                | Completed Workbook 2.3 to 2.5 pages.                                                                              |

## Week 8 · 21–25 September 2026

| Day                 | Science · 8:45 – 9:35                                                                             | Mathematics · 10:45 – 11:35                                                             |
|---------------------|---------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| <b>Monday 21</b>    | Unit 2.4 The Water Cycle — the section skipped earlier; you cannot see water vapour. Packet 7 in. | Unit 2.6 Inequalities — the English of < and >.                                         |
| <b>Tuesday 22</b>   | Workbook day — Unit 2.4.                                                                          | Workbook day — Unit 2.6.                                                                |
| <b>Wednesday 23</b> | Unit 2.8 Acids and Bases — two glasses, and a question left open.                                 | Units 3.1–3.2 Place Value and Rounding, period 1 — powers of 10; the point never moves. |
| <b>Thursday 24</b>  | Workbook day — Unit 2.                                                                            | Units 3.1–3.2, period 2 — rounding, and the instruction words. Packet 8 out.            |
| <b>Friday 25</b>    | Mid-Autumn Festival — festival time in both periods.                                              |                                                                                         |

No parent update is on file for this week.

# Monday 21 September

| Subject                             | Learning Objective / Focus                                                                                                                                                                                         | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Evidence of Learning                                                                                                                                                              |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.4 The Water Cycle – skipped when Unit 2 was taught in order.<br><br>Name the eight key words and where each stage happens; explain each stage with the particle theory from 2.3; water vapour is invisible. | Packet 7 collected at the start of class.<br><a href="#">► Slides · Science 2.4 The Water Cycle</a><br><br>Starter: where does rain come from? Three answers, not corrected yet.<br><br>Mr Bowen's glass of water, 2000 years ago. Copy WATER CYCLE and ATMOSPHERE. The science is known already – this is the English and the places.<br><br>Draw This: the whole cycle, six labelled arrows.<br><br>Water goes up: copy WATER VAPOUR and TRANSPIRATION. Vote: can you see water vapour? No, never.<br><br>Water comes down: copy PRECIPITATION; the four -ation words. Where it lands: OPEN WATER, SURFACE RUN-OFF, GROUNDWATER.<br><br>Questions 1–7; Which Stage? game; homework: the water-cycle poster, Activity 2.4.1. | Packet 7 in from every student; missing packets noted.<br><br>Seven written panels and the cycle diagram.<br><br>Cloud, mist, steam and breath named as liquid drops, not vapour. |
| <b>Mathematics</b><br>10:45 – 11:35 | Unit 2.6 Inequalities.<br><br>Read < and > aloud, and fewer, below, under and over as the same signs; show an inequality on a number line; give the smallest or largest integer that works.                        | <a href="#">► Slides · Maths 2.6 Inequalities</a><br><br>Starter: < or >, then read each one aloud in a full sentence.<br><br>Copy LESS THAN / GREATER THAN; the other words a word problem uses.<br><br>Mr Bowen's cats: many answers, but not 3.5. Copy INEQUALITY and INTEGER.<br><br>Copy OPEN CIRCLE and ARROW. Vote: $x > 3$ , so is the smallest 3 or 4?<br><br>Could It Be? game.<br><br>Negatives: vote on $t < -2$ ; copy LESS THAN MEANS LEFT; the thermometer on its side.<br><br>Mr Bowen's homework, four mistakes; word problems.                                                                                                                                                                              | Six copy-down panels in the notebook.<br><br>$x > 3$ gives 4, and $t < -2$ gives -3, -4, ... on whiteboards.                                                                      |

## Tuesday 22 September

| Subject                             | Learning Objective / Focus            | Main Activities                                                   | Evidence of Learning          |
|-------------------------------------|---------------------------------------|-------------------------------------------------------------------|-------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Consolidating Unit 2.4 independently. | Workbook 2.4 – continue and complete, circulating and supporting. | Completed Workbook 2.4 pages. |
| <b>Mathematics</b><br>10:45 – 11:35 | Consolidating Unit 2.6 independently. | Workbook 2.6 – continue and complete, circulating and supporting. | Completed Workbook 2.6 pages. |

## Wednesday 23 September

| Subject                             | Learning Objective / Focus                                                                                                                                                             | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Evidence of Learning                                                                                                       |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Unit 2.8 Acids and Bases — Stage 7 content; no Learner's Book pages.<br>Name acids and alkalis; use litmus and universal indicator; read the pH scale; explain neutralisation.         | <p>► <a href="#">Slides · Science 2.8 Acids and Bases</a></p> <p>Starter: three sour foods.</p> <p>Two identical glasses, lemon juice and soapy water — which is which? Left open.</p> <p>Copy ACID, BASE and ALKALI — the exam word is alkali. Copy CORROSIVE and the three safety rules.</p> <p>Copy INDICATOR and LITMUS; the glasses answered. Red cabbage for home.</p> <p>Copy UNIVERSAL INDICATOR, pH SCALE and NEUTRAL. Draw This: the pH scale in colour, 1 to 14.</p> <p>Dip the paper: eleven liquids, acid, neutral or alkali said first.</p> <p>Vote: pH 1 or pH 13, which one burns? Both.</p> <p>Copy NEUTRALISATION; Draw This: three beakers. Questions 1–6; Acid Snap.</p> | Seven written panels and two diagrams.<br>The pH scale numbered from 1, not 0.<br>Exit question: why toothpaste is a base. |
| <b>Mathematics</b><br>10:45 – 11:35 | Units 3.1–3.2 Place Value and Rounding, period 1 of 2.<br>Read $10^3$ aloud; multiply and divide by powers of 10 by moving the digits, not by “adding zeros”; convert mg, g, kg and t. | <p>► <a href="#">Slides · Maths 3.1–3.2 Place Value and Rounding</a> — slides 1–18.</p> <p>Starter: count the zeros in 10, 100 and 1000; the ten-zero number counted aloud.</p> <p>Copy POWER and POWERS OF 10; “ten squared” and “ten cubed” said aloud.</p> <p>“Just add a zero.” Vote: is <math>7.2 \times 10^3</math> equal to 7.2000 or 7200? The widget: the point never moves.</p> <p>Copy MULTIPLYING MOVES LEFT and DIVIDING MOVES RIGHT; Which Way? game.</p> <p>The missing power; Mr Bowen's chain of moves; copy METRIC MASS; the Moon and Jupiter.</p> <p>The place-value table, then the part-1 checklist.</p>                                                                | Five copy-down panels in the notebook.<br>0.052 written correctly, not 0.52.                                               |

## Thursday 24 September

| Subject                             | Learning Objective / Focus                                                                                                                                                                                      | Main Activities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Evidence of Learning                                                                                                                                    |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Science</b><br>8:45 – 9:35       | Consolidating Unit 2 independently.                                                                                                                                                                             | Workbook Unit 2 – continue and complete, circulating and supporting. There are no workbook pages for 2.8.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Completed Workbook Unit 2 pages.                                                                                                                        |
| <b>Mathematics</b><br>10:45 – 11:35 | Units 3.1–3.2 Place Value and Rounding, period 2 of 2.<br><br>Round to a given number of decimal places; keep the zero, so 34.9892 is 35.0; work one place further before rounding; know the instruction words. | <p>► <a href="#">Slides · Maths 3.1–3.2 Place Value and Rounding</a> – slides 17–40.</p> <p>Slide 17, the place-value table, as a one-minute recap.</p> <p>Copy ROUND. The instruction words: round to, correct to, to 2 d.p.; copy SAME JOB, DIFFERENT WORDS and DEGREE OF ACCURACY.</p> <p>Copy DECIMAL PLACES and THE RULE; four on whiteboards.</p> <p>34.9892 to 1 d.p.: 35 or 35.0? Copy KEEP THE ZERO.</p> <p>Vote: 58 divided by 7 to 3 d.p., 8.285 or 8.286? Copy ONE PLACE FURTHER.</p> <p>Mr Bowen's homework, four mistakes; word problems.</p> <p>Packet 8 and Extra sheet 8 handed out together – due Monday 28 September.</p> | <p>Seven more panels, twelve in total.</p> <p>34.9892 to 1 d.p. written as 35.0.</p> <p>Every student has Packet 8 with the due date written on it.</p> |

## Friday 25 September

| Subject                             | Learning Objective / Focus | Main Activities                                                   | Evidence of Learning |
